Gass,Arjang A.

Assad,2007-02-15 An Annotated Timeline of Operations Research An Informal History recounts the evolution of Operations Research OR as a new science the science of decision making Arising from the urgent operational issues of World War II the philosophy and methodology of OR has permeated the resolution of decision problems in business industry and government The Timeline chronicles the history of OR in the form of self contained expository entries Each entry presents a concise explanation of the events and people under discussion and provides key sources where further relevant information can be obtained In addition books and papers that have influenced the development of OR or helped to educate the first generations of OR academics and practitioners are cited throughout the book Starting in 1564 with seminal ideas that form the precursors of OR the Timeline traces the key ideas and events of OR through 2004 The Timeline should interest anyone involved in OR researchers practitioners academics and especially students who wish to learn how OR came into being Further the scope and expository style of the Timeline should make it of value to the general reader interested in the development of science and technology in the last half of the twentieth century *The Theory of Search Games and Rendezvous* Steve Alpern,Shmuel Gal,2006-04-10 Search Theory is one of the original disciplines within the field of Operations Research It deals with the problem faced by a Searcher who wishes to minimize the time required to find a hidden object or target The Searcher chooses a path in the search space and finds the target when he is sufficiently close to it Traditionally the target is assumed to have no motives of its own regarding when it is found it is simply stationary and hidden according to a known distribution e g oil or its motion is determined stochastically by known rules e g a fox in a forest The problems dealt with in this book assume on the contrary that the target is an independent player of equal status to the Searcher who cares about when he is found We consider two possible motives of the target and divide the book accordingly Book I considers the zero sum game that results when the target here called the Hider does not want to be found Such problems have been called Search Games with the zero sum qualifier understood Book II considers the opposite motive of the target namely that he wants to be found In this case the Searcher and the Hider can be thought of as a team of agents simply called Player I and Player II with identical aims and the coordination problem they jointly face is called the Rendezvous Search Problem **Modeling and Control of Complex Systems** Petros A. Ioannou,Andreas Pitsillides,2007-12-26 There is an emerging interest in the area of modeling and control of complex systems for applications in many engineering and non engineering fields such as biology transportation robotics information technology and communications This text provides a pioneering single source compilation of material from internationally renowned experts with different approaches to the applications of modeling and control of complex systems Sections cover complex systems biological systems communication networks sensor networks and automation autonomous vehicles and robotics transportation systems and structures and others The authors highlight the most important areas of research the latest advances and possible future directions

Fleet Tactics and Naval Operations, Third Edition Estate of Wayne P Hughes, Robert P. Girrier, 2018-06-15 The revised edition of this indispensable work still covers battle tactics at sea from the age of fighting sail to the present with emphasis on trends constants and variables Fleet Tactics and Naval Operations continues to emphasize combat data including how hitting and damage rates and maneuvering have been conducted to achieve an advantage over the centuries The third edition highlights the current swift advances in unmanned vehicles artificial intelligence cyber warfare in peace and war and other effects of information warfare and how they are changing the ways battles at sea will be fought and won

Airborne Anti-Submarine Warfare Michael Glynn, 2022-05-30 This military history explores more than a century of aerial submarine hunting from WWI through the Cold War and beyond U S Navy veteran Michael Glynn served as a submarine hunting pilot Now he chronicles the evolution of this unique combat role from the Great War through the Battle of the Atlantic in World War II and on to secret Cold War confrontations He traces the parallel evolution of both aircraft and submarine as each side tries to gain advantage Through his expert analysis Glynn distills complicated oceanography operations analysis and technical theory helping the reader understand how complex weapons and sensors function He also examines submarine hunts in action showing how theory and practice work together to help aviators detect their targets

Multi-UAS Minimum Time Search in Dynamic and Uncertain Environments Sara Pérez Carabaza, 2021-06-30 This book proposes some novel approaches for finding unmanned aerial vehicle trajectories to reach targets with unknown location in minimum time At first it reviews probabilistic search algorithms that have been used for dealing with the minimum time search MTS problem and discusses how metaheuristics and in particular the ant colony optimization algorithm ACO can help to find high quality solutions with low computational time Then it describes two ACO based approaches to solve the discrete MTS problem and the continuous MTS problem respectively In turn it reports on the evaluation of the ACO based discrete and continuous approaches to the MTS problem in different simulated scenarios showing that the methods outperform in most all the cases over other state of the art approaches In the last part of the thesis

the work of integration of the proposed techniques in the ground control station developed by Airbus to control ATLANTE UAV is reported in detail providing practical insights into the implementation of these methods for real UAVs The Theoretical Biologist's Toolbox Marc Mangel,2006-07-27 Mathematical modelling is widely used in ecology and evolutionary biology and it is a topic that many biologists find difficult to grasp In this new textbook Marc Mangel provides a no nonsense introduction to the skills needed to understand the principles of theoretical and mathematical biology Fundamental theories and applications are introduced using numerous examples from current biological research complete with illustrations to highlight key points Exercises are also included throughout the text to show how theory can be applied and to test knowledge gained so far Suitable for advanced undergraduate courses in theoretical and mathematical biology this book forms an essential resource for anyone wanting to gain an understanding of theoretical ecology and evolution *Advanced Distance Sampling* S. T. Buckland,D. R Anderson,K. P. Burnham,J. L. Laake,D. L. Borchers,L. Thomas,2004-08-19 This advanced text focuses on the uses of distance sampling to estimate the density and abundance of biological populations It addresses new methodologies new technologies and recent developments in statistical theory and is the follow up companion to Introduction to Distance Sampling OUP 2001 In this text a general theoretical basis is established for methods of estimating animal abundance from sightings surveys and a wide range of approaches to analysis of sightings data is explored These approaches include modelling animal detectability as a function of covariates where the effects of habitat observer weather etc on detectability can be assessed estimating animal density as a function of location allowing for example animal density to be related to habitat and other locational covariates estimating change over time in populations a necessary aspect of any monitoring programme estimation when detection of animals on the line or at the point is uncertain as often occurs for marine populations or when the survey region has dense cover survey design and automated design algorithms allowing rapid generation of sound survey designs using geographic information systems adaptive distance sampling methods which concentrate survey effort in areas of high animal density passive distance sampling methods which extend the application of distance sampling to species that cannot be readily detected in sightings surveys but can be trapped and testing of methods by simulation so that performance of the approach in varying circumstances can be assessed Authored by a leading team this text is aimed at professionals in government and environment agencies statisticians biologists wildlife managers conservation biologists and ecologists as well as graduate students studying the density and abundance of biological populations **Next Generation of Photovoltaics** Ana Cristobal,Antonio Martí Vega,Antonio Luque López,2012-02-14 This book presents new concepts for a next generation of PV Among these concepts are Multijunction solar cells multiple excitation solar cells or how to take benefit of high energy photons for the creation of more than one electron hole pair intermediate band solar cells or how to take advantage of below band gap energy photons and related technologies for quantum dots nitrides thin films advanced light management approaches plasmonics Written by world class experts in next generation photovoltaics this book

is an essential reference guide accessible to both beginners and experts working with solar cell technology The book deeply analyzes the current state of the art of the new photovoltaic approaches and outlines the implementation paths of these advanced devices Topics addressed range from the fundamentals to the description of state of the art of the new types of solar cells

The Evolution of Anisogamy Tatsuya Togashi, Paul Alan Cox, 2011-04-14 Darwin identified the existence of separate male and female gametes as one of the central mysteries of evolutionary biology 150 years later the question of why male gametes exist remains an intriguing puzzle In this the first book solely devoted to the evolution of anisogamy top theorists in the field explore why gamete dimorphism characterizes nearly all plants and animals Did separate male and female gametes evolve as a result of competition or does anisogamy instead represent selection for cooperation If disruptive selection drove the evolution of anisogamy with male gametes focused on search and fusion and female gametes provisioning the new zygote why do some algal species continue to produce gametes of a single size Does sperm limitation or escape from infection better explain the need for extremely small highly mobile sperm Written by leaders in the field this volume offers an authoritative and cutting edge overview of evolutionary theory
