Ravishankar,2022-03-28 Marine plant life is an abundant source of nutrients that enhance the daily diet In recent years consuming diets rich in seaweeds or their extracts have been shown to provide health benefits due to being rich in macronutrients micronutrients and nutraceuticals The commercial value of seaweeds for human consumption is increasing annually and some countries harvest several million tons annually The seaweeds industry is valued at around 12 billion in 2017 and supports millions of families worldwide Seaweeds production grew globally by 30 million tons in 2016 Seaweeds have seen increasing usage in the food industry due to their abundance of beneficial nutrients vitamins and 3 fatty acids To date there have been no books that comprehensively cover up to date information on seaweeds cultivation processing extraction and nutritional properties This text lays out the properties and effects of seaweeds from their use as bioresources to their use in the feed industry to their applications in wastewater management and biofuels Sustainable Global Resources Of Seaweeds Volume 1 Industrial Perspectives offers a complete overview of seaweeds from their cultivation and processing steps to their bioactive compounds and Industrial applications while also providing the foundational information needed to understand these plants holistically Chapters in this volume focus on seaweeds bioresources ecology and biology composition and cultivation plus usage of seaweeds extracts for the feed industry An entire section is dedicated to waste water treatment bioremediation biofuel and biofertilizer application of seaweeds For any researcher in need of a comprehensive and up to date single source on seaweeds cultivation this volume provides all the information necessary to gain a thorough understanding of this ever important product Seaweeds as Plant Fertilizer, Agricultural Biostimulants and Animal Fodder Leonel Pereira,Kiril Bahcevandziev,Nilesh H. Joshi,2019-10-18 The main effects of Seaweed extracts *Ascophyllum* *Fucus* *Sargassum* *Saccorhiza* *Laminaria* *Gelidium* and others when used as agricultural fertilizers are better seed germination and higher quality fruit production with longer shelf life better use of soil nutrients more productive crops and plants with greater resistance to unfavorable environmental conditions Algae also have a long history of use as animal feed They have a highly variable composition depending on the species collection season and habitat and on external conditions such as water temperature light intensity and nutrient concentration in water In relation to ruminal fermentation a high variability of the digestibility values was found among seaweed species and cannot be attributed only to the composition of different nutrients of the algae The role of marine algae for reduction of methane production is discussed with particular emphasis on novel

algae based feed strategies that target minimal methane emissions without affecting the functionality of the microbiota and overall animal productivity

Biostimulants: Exploring Sources and Applications Naleeni Ramawat, Vijay Bhardwaj, 2022-05-24 This edited book is a comprehensive compilation highlighting sources of biostimulants their production

influence on plant growth and development and regulatory status of plant biostimulants for better understanding and opening new vistas for future research. Biostimulants: the biological formulations are known to meliorate the plants growth and vigour, improve nutritional efficiency along with maintaining their well being mainly via providing protection against a wide range of infections. Both horticultural as well as agricultural crops involve the utilization of the biostimulants. Fulvic and humic acids, nitrogen containing compounds, protein hydrolysates, favourable bacteria and fungi and extracts of seaweed are the chief active components of these. The major driving force for these materials is the organic farming industry and demand for sustainable crop production. This book will be of great interest to researchers, teachers, climate change scientists, capacity builders and policy makers. Moreover, this book does the work of a supplementary reading for students in various fields such as agriculture, soil science, ecology, environmental science and forestry at undergraduate as well as graduate level. This will be a gainful read for national and international agricultural scientists and the policy makers. Elaborates on biostimulants induced influence of plant growth and development. Covers all aspects of biostimulants sources and its role in plant life in detail. Discusses evidence based approach in biostimulants sources and its useful applications in plants. **Seaweed in**
