Longevity The Biology And Demography Of Life Span:

Longevity James R. Carey, 2003-03-02 Despite our deep interest in mortality little is known about why some individuals live to middle age and others to extreme old age Life span mortality and aging present some of the most profound mysteries in biology In *Longevity* James Carey draws on unprecedented data to develop a biological and demographic framework for identifying the key factors that govern aging life span and mortality in humans and other animals Carey presents the results of a monumental twelve year National Institute on Aging funded research project on the determinants of longevity using data from the life tables of five million Mediterranean fruit flies the most comprehensive set of life table studies ever on the mortality dynamics of a single species He interprets the fruit fly data within the context of human aging and the aging process in general to identify the determinants of mortality Three key themes emerge the absence of species specific life span limits the context specific nature of the mortality rate and biodemographic linkages between longevity and reproduction A powerful foundation for the emerging field of biodemography and a rich framework for considering the future of human life span *Longevity* will be an indispensable resource for readers from a range of fields including population biology demography gerontology ecology evolutionary biology and medical research

Human Longevity, Individual Life Duration, and the Growth of the Oldest-Old Population Jean-Marie Robine, Eileen M. Crimmins, Shiro Horiuchi, Yi Zeng, 2007-03-21 Old age survival has considerably improved in the second half of the twentieth century Life expectancy in wealthy countries has increased on average from 65 years in 1950 to 76 years in 2005 The rise was more spectacular in some countries the life expectancy for Japanese women rose from 62 years to 86 years during the same period Driven by this longevity extension the population aged 80 and over in those countries has grown fivefold from 8.5 million in 1950 to 44.5 million in 2005 Why has such a substantial extension of human lifespan occurred How long can we live In this book these fundamental questions are explored by experts from such diverse fields as biology medicine epidemiology demography sociology and mathematics they report on recent cutting edge studies about essential issues of human longevity such as evolution of lifespan of species genetics of human longevity reasons for the recent improvement in survival of the elderly medical and behavioral causes of deaths among very old people and social factors of long survival in old age

Clinical Evaluation Criteria for Aging and Aging-related Multimorbidity Ilia Stambler,Alexey Moskalev,2021-10-29

Inferior Angela Saini,2017-05-30 What science has gotten so shamefully wrong about women and the fight by both female and male scientists to rewrite what we thought we knew For hundreds of years it was common sense women were the inferior sex Their bodies were weaker their minds feeblers their role subservient No less a scientist than Charles Darwin asserted that women were at a lower stage of evolution and for decades scientists most of them male of course claimed to find evidence to

support this Whether looking at intelligence or emotion cognition or behavior science has continued to tell us that men and women are fundamentally different Biologists claim that women are better suited to raising families or are more gently uniquely empathetic Men on the other hand continue to be described as excelling at tasks that require logic spatial reasoning and motor skills But a huge wave of research is now revealing an alternative version of what we thought we knew The new woman revealed by this scientific data is as strong strategic and smart as anyone else In *Inferior* acclaimed science writer Angela Saini weaves together a fascinating and sorely necessary new science of women As Saini takes readers on a journey to uncover science's failure to understand women she finds that we're still living with the legacy of an establishment that's just beginning to recover from centuries of entrenched exclusion and prejudice Sexist assumptions are stubbornly persistent even in recent years researchers have insisted that women are choosy and monogamous while men are naturally promiscuous or that the way men's and women's brains are wired confirms long discredited gender stereotypes As Saini reveals however groundbreaking research is finally rediscovering women's bodies and minds *Inferior* investigates the gender wars in biology psychology and anthropology and delves into cutting edge scientific studies to uncover a fascinating new portrait of women's brains bodies and role in human evolution
