Fire In The Turtle House Osha Gray Davidson,Osha Davidson,2008-11-05 Sea turtles have existed since the time of the dinosaurs But now suddenly the turtles are dying ravaged by a mysterious plague that some biologists consider the most serious epidemic now raging in the natural world Perhaps most important sea turtles aren t the only marine creatures falling prey to deadly epidemics Over the last few decades diseases have been burning through nearshore waters around the world with unprecedented lethality What is happening to the sea turtle and how can it be stopped In this fascinating scientific detective story Osha Gray Davidson tracks the fervent efforts of the extraordinary and often quirky scientists marine biologists veterinarians and others racing against the clock to unravel a complicated biological and environmental puzzle and keep the turtles from extinction He follows the fates of particular turtles revealing their surprisingly distinct personalities and why they inspire an almost spiritual devotion in the humans who come to know them He also explores through vivid historical anecdotes and examples the history of man s relationship to the sea opening a window onto the role played by humans in the increasing number of marine die offs and extinctions Beautifully written intellectually provocative *Fire in the Turtle House* reveals how emerging diseases wreaking havoc in the global ocean pose an enormous direct threat to humanity This is science journalism at its best

Perfect Pairs

Melissa Stewart,Nancy Chesley,2014 A teacher s guide to using fiction and nonfiction picture books to teach life sciences

Perfect Pairs, K-2 Melissa Stewart,Nancy Chesley,2023-10-10 Hands on lessons can be fun and compelling but when it

comes to life science they aren't always possible, practical, effective, or safe. Children can't follow a lion as it stalks a gazelle, visit the exotic kapok tree in a rain forest, or swim alongside the underwater life in a pond. But they can explore a whole world of animals, plants, and ecosystems through the pages of beautifully illustrated science-themed picture books. Perfect Pairs, which marries fiction and nonfiction picture books focused on life science, helps educators think about and teach life science in a whole new way. Each of the twenty-two lessons in this book is built around a pair of books that introduces a critical life science concept and guides students through an inquiry-based investigative process to explore that idea from animal environment interactions to the role of structure in plant and animal survival, from inheritance of traits to variation of species. Each lesson starts with a Wonder Statement and comprises three stages. Engaging Students features a hands-on activity that captures student interest, uncovers current thinking, and generates vocabulary. The heart of the investigative process, Exploring with Students, spotlights the paired books as the teacher reads aloud and helps students find and organize information into data tables. Encouraging Students to Draw Conclusions shows students how to review and analyze the information they have collected. Bringing high-quality science-themed picture books into the classroom engages a broad range of students, addresses the Performance Expectations outlined in the Next Generation Science Standards, and supports the goals of the Common Core State Standards for English Language Arts. Even if you are science-shy, Perfect Pairs can help you become a more confident teacher whose classroom buzzes with curious students eager to explore their natural world.
