**Science, Religion, and the Search for Extraterrestrial Intelligence** David Wilkinson, 2013-08-02 If the discovery of life elsewhere in the universe is just around the corner what would be the consequences for religion Would it represent another major conflict between science and religion even leading to the death of faith Some would suggest that the discovery of any suggestion of extraterrestrial life would have a greater impact than even the Copernican and Darwinian revolutions It is now over 50 years since the first modern scientific papers were published on the search for extraterrestrial intelligence SETI Yet the religious implications of this search and possible

discovery have never been systematically addressed in the scientific or theological arena SETI is now entering its most important era of scientific development New observation techniques are leading to the discovery of extra solar planets daily and the Kepler mission has already collected over 1000 planetary candidates This deluge of data is transforming the scientific and popular view of the existence of extraterrestrial intelligence Earth like planets outside of our solar system can now be identified and searched for signs of life Now is a crucial time to assess the scientific and theological questions behind this search This book sets out the scientific arguments undergirding SETI with particular attention to the uncertainties in arguments and the strength of the data already assembled It assesses not only the discovery of planets but other areas such as the Fermi paradox the origin and evolution of intelligent life and current SETI strategies In all of this it reflects on how these questions are shaped by history and pop culture and their relationship with religion especially Christian theology It is argued that theologians need to take seriously SETI and to examine some central doctrines such as creation incarnation revelation and salvation in the light of the possibility of extraterrestrial life
