 Marsden, Tudor S. Ratiu, 2007-07-03 The invited papers in this volume are written in honor of Alan Weinstein one of the world's
 foremost geometers Contributions cover a broad range of topics in symplectic and differential geometry Lie theory
 mechanics and related fields Intended for graduate students and working mathematicians this text is a distillation of
 prominent research and an indication of future trends in geometry mechanics and mathematical physics *Algebraic
 Geometry and Singularities* Antonio Campillo Lopez, Luis Narvaez Macarro, 2012-12-06 The focus of this volume lies on
 singularity theory in algebraic geometry It includes papers documenting recent and original developments and methods in
 subjects such as resolution of singularities D module theory singularities of maps and geometry of curves The papers
 originate from the Third International Conference on Algebraic Geometry held in La Rbida Spain in December 1991 Since
 then the articles have undergone a meticulous process of refereeing and improvement and they have been organized into a
 comprehensive account of the state of the art in this field *Functional Calculus of Pseudodifferential Boundary Problems*
 Gerd Grubb, 2012-12-06 Pseudodifferential methods are central to the study of partial differential equations because they
 permit an algebraization A replacement of compositions of operators in n space by simpler product rules for their symbols
 The main purpose of this book is to set up an operational calculus for operators defined from differential and
 pseudodifferential boundary value problems via a resolvent construction A secondary purpose is to give a complete
 treatment of the properties of the calculus of pseudodifferential boundary problems with transmission both the first version
 by Boutet de Monvel brought completely up to date in this edition and in version containing a parameter running in an
 unbounded set And finally the book presents some applications to evolution problems index theory fractional powers spectral
 theory and singular perturbation theory In this second edition the author has extended the scope and applicability of the
 calculus with original contributions and perspectives developed in the years since the first edition A main improvement is the
 inclusion of globally estimated symbols allowing a treatment of operators on noncompact manifolds Many proofs have been
 replaced by new and simpler arguments giving better results and clearer insights The applications to specific problems have
 been adapted to use these improved and more concrete techniques Interest continues to increase among geometers and
 operator theory specialists in the Boutet de Monvel calculus and its various generalizations Thus the book's improved proofs
 and modern points of view will be useful to research mathematicians and to graduate students studying partial differential
 equations and pseudodifferential operators *Analytic Number Theory: The Halberstam Festschrift 2* Bruce C.
 Berndt, Harold Diamond, Adolf J Hildebrand, 1996-05-01 The second of two volumes presenting papers from an international
 conference on analytic number theory The two volumes contain 50 papers with an emphasis on topics such as sieves related
 combinatorial aspects multiplicative number theory additive number theory and Riemann zeta function **Algorithms in**

Algebraic Geometry and Applications Laureano Gonzalez-Vega, Recio Tomas, 2012-12-06 The present volume contains a selection of refereed papers from the MEGA 94 symposium held in Santander Spain in April 1994 They cover recent developments in the theory and practice of computation in algebraic geometry and present new applications in science and engineering particularly computer vision and theory of robotics The volume will be of interest to researchers working in the areas of computer algebra and symbolic computation as well as to mathematicians and computer scientists interested in gaining access to these topics

Functional Analysis on the Eve of the 21st Century Simon Gindikin, James Lepowsky, Robert Wilson, 2012-12-06 A four day conference Functional Analysis on the Eve of the Twenty First Century was held at Rutgers University New Brunswick New Jersey from October 24 to 27 1993 in honor of the eightieth birthday of Professor Israel Moiseyevich Gelfand He was born in Krasnye Okna near Odessa on September 2 1913 Israel Gelfand has played a crucial role in the development of functional analysis during the last half century His work and his philosophy have in fact helped to shape our understanding of the term functional analysis itself as has the celebrated journal Functional Analysis and Its Applications which he edited for many years Functional analysis appeared at the beginning of the century in the classic papers of Hilbert on integral operators Its crucial aspect was the geometric interpretation of families of functions as infinite dimensional spaces and of operators particularly differential and integral operators as infinite dimensional analogues of matrices directly leading to the geometrization of spectral theory This view of functional analysis as infinite dimensional geometry organically included many facets of nineteenth century classical analysis such as power series Fourier series and integrals and other integral transforms

Cardinal Invariants On Boolean Algebras James Donald Monk, 1996 This book is concerned with cardinal number valued functions defined for any Boolean algebra Examples of such functions are independence which assigns to each Boolean algebra the supremum of the cardinalities of its free subalgebras and cellularity which gives the supremum of cardinalities of sets of pairwise disjoint elements Twenty one such functions are studied in detail and many more in passing The questions considered are the behaviour of these functions under algebraic operations such as products free products ultraproducts and their relationships to one another Assuming familiarity with only the basics of Boolean algebras and set theory through to simple infinite combinatorics and forcing the book reviews current knowledge about these functions giving complete proofs for most facts A special feature of the book is the attention given to open problems of which 97 are formulated Based on Cardinal Functions on Boolean Algebras 1990 by the same author the present work is nearly twice the size of the original work It contains solutions to many of the open problems which are discussed in greater detail than before Among the new topics considered are ultraproducts and Fedorchuk's theorem and there is a more complete treatment of the cellularity of free products Diagrams at the end of the book summarize the relationships between the functions for many important classes of Boolean algebras including tree algebras and superatomic algebras

Review This book is an indispensable tool for anyone working in Boolean algebra and is also recommended for set theoretic
