Revealing the Most Energetic Light from Pulsars and Their Nebulae David Carreto Fidalgo, 2019-07-17 This book reports on the extraordinary observation of TeV gamma rays from the Crab Pulsar the most energetic light ever detected from this type of object. It presents detailed information on the painstaking analysis of the unprecedentedly large dataset from the MAGIC telescopes and comprehensively discusses the implications of pulsed TeV gamma rays for state of the art pulsar emission models. Using these results the book subsequently explores new testing methodologies for Lorentz Invariance Violation in terms of a wavelength dependent speed of light. The book also covers an updated search for Very High Energy VHE 100 GeV emissions from millisecond pulsars using the Large Area Telescope on board the Fermi satellite as well as a study on the promising Pulsar Wind Nebula candidate PSR J0631. The observation of VHE gamma rays is essential to studying the non thermal sources of radiation in our Universe. Rotating neutron stars also known as pulsars are an extreme source class known to emit VHE gamma rays. However to date only two pulsars have been detected with emissions above 100 GeV and our understanding of their emission mechanism is still lacking.

Physics for the Inquiring Mind Eric M. Rogers, 2011-04-17 In our scientific age, an understanding of physics is part of a liberal education. Lawyers, bankers, governors, business heads, administrators, all wise, educated people need a lasting understanding of physics so that they can enjoy those contacts with science and scientists that are part of our civilization, both materially and intellectually. They need knowledge and understanding instead of the feelings, all too common, that physics is dark and mysterious and that physicists are a strange people with incomprehensible interests. Such a sense of understanding science and scientists can be gained neither from sermons on the beauty of science nor from the rigorous courses that colleges have offered for generations when the headache clears away; it leaves little but a confused sense of mystery. Nor is the need met by survey courses that offer a smorgasbord of tidbits; they give science a bad name as a compendium of information or formulas. The non-scientist needs a course of study that enables him to learn real science and make it his own with delight. For lasting benefits, the intelligent non-scientist needs a course of study that enables him to learn genuine science carefully and then encourages him to think about it and use it. He needs a carefully selected framework of topics, not so many that learning becomes superficial and hurried, not so few that he misses the connected nature of scientific work and thinking. He must see how scientific knowledge is built up by building some scientific knowledge of his own by reading and discussing and, if possible, by doing experiments himself. He must think his own way through some scientific arguments. He must form his own opinion with guidance concerning the parts played by experiment and theory and he must be shown how to develop a taste for good theory. He must see several varieties of scientific method at work. And above all, he must think about science for himself and enjoy that. These are the things that this book encourages readers to gain by their own study and thinking. *Physics for the Inquiring Mind* is a book for the inquiring mind of students in college and for other readers who want to grow in scientific wisdom, who want to know what physics really is.
