Magic as Metaphor in Anime Dani Cavallaro, 2010-03-08 Since its inception as an art form anime has engaged with themes symbols and narrative strategies drawn from the realm of magic In recent years the medium has increasingly turned to magic specifically as a metaphor for a wide range of cultural philosophical and psychological concerns This book first examines a range of Eastern and Western approaches to magic in anime addressing magical thinking as an overarching concept which unites numerous titles despite their generic and tonal diversity It then explores the collusion of anime and magic with reference to specific topics A close study of cardinal titles is complemented by allusions to ancillary productions in order to situate the medium's fascination with magic within an appropriately broad historical context **Adaptation for Animation** Hannes Rall, 2019-06-21 Talented animation artists often neglect successful storytelling in favor of strong visuals but now you can have both with this complete guide to adaptation for animation Veteran independent filmmaker Hannes Rall teaches you how to draw and adapt inspiration from copyright free materials like fairy tales myths and classic literature making it easier than ever to create your own compelling narrative Particular focus is given to making the adequate narrative and visual choices when transferring a text from page to screen How to create a successful adaptation With sections on subjects like transcultural adaptations visual poetry and production design this book is just the right mix of practical advice lavish illustrations and industry case studies to give you everything you need to start adapting your story today Key features Learn to apply concepts of adapting classic and modern literature for animation in different techniques Exclusive interviews with animation legends Giannalberto Bendazzi John Canemaker Ishu Patel and Georges Schwizgebel Lavishly illustrated with 325 color images mostly never published before that give thrilling insights into the visual development of award winning animated adaptations **Automatic Generation of Computer Animation** Ruqian Lu, Songmao Zhang, 2003-08-06 We are both fans of watching animated stories Every evening before or after dinner we always sit in front of the television and watch the animation program which is originally produced and shown for children We find ourselves becoming younger while immersed in the interesting plot of the animation how the princess is first killed and then rescued how the little rat defeats the big cat etc But what we have found in those animation programs are not only interesting plots but also a big chance for the application of computer science and artificial intelligence techniques As is well known the cost of producing animated movies is very high even with the use of computer graphics techniques Turning a story in text form into an animated movie is a long and complicated procedure We came to the conclusion that many parts of this process could be automated by using artificial intelligence techniques It is actually a challenge and test for machine intelligence So we decided to explore the possibility of a full life cycle automation of computer animation generation By full life cycle we mean the generation process of computer animation from a children's story in natural language text form to the final animated movie It is of course a task of immense difficulty However we decided to try our best and to see how far we could go Contemporary Fairy-Tale Magic
