## **Magnesium Technology:**

*Magnesium Technology* Horst E. Friedrich, Barry Leslie Mordike, 2006-01-16 Magnesium with a density of 1.74 g cm<sup>3</sup> is the lightest structural metal and magnesium is increasingly chosen for weight critical applications such as in land based transport systems. *Magnesium Technology* substantially updates and complements existing reference sources on this key material. It assembles international contributions from seven countries covering a wide range of research programs into new alloys with the requisite property profiles, i.e. the current state of both research and technological applications of magnesium. In particular, the international team of authors covers key topics such as casting and wrought alloys, fabrication methods, corrosion and protection, engineering requirements and strategies with examples from the automobile, aerospace and consumer goods industries and recycling. This authoritative reference and overview addresses materials researchers as well as design engineers.

*Magnesium Technology* Horst E. Friedrich, Barry Leslie Mordike, 2006 In this book the authors present the current state of both research and technological application of magnesium. In particular, casting and wrought alloys are presented in Chapter 5, followed by a large chapter dedicated to fabrication methods. Corrosion and Protection are treated in Chapter 7. Chapter 8 discusses Engineering Requirements, Strategies and Examples for automobiles in Europe, USA, Asia and Pacific and also for Aerospace and Consumer Articles. Chapter 10 is dedicated to recycling. The experience of authors from seven countries has been combined to produce this book. The book addresses materials researchers as well as design engineers.
