[Open Field Magnetic Resonance Imaging](#) D.H.W. Grönemeyer, R.B. Lufkin, 2012-12-06 Until the advent of the Access open magnet introduced by Diasonics in 1988 claustrophobia and the loud hammering noise were considered part of the price patients had to pay for the benefits of this superb imaging approach The fact that it was possible to obtain images of acceptable diagnostic quality while the patient

was resting comfortably in pleasant airy surroundings reminiscent of a four poster bed was certainly a great advantage. It became obvious however that the open magnet also offered the opportunity for the interventional radiologist or surgeon to perform procedures as access to the patient was immediate and can be continuous during the scanning. It was also necessary to develop methods for real time imaging and also vary the spatial resolution obtaining the best when speed was not essential. After this instrument showed the potential of revolutionizing both the approach to imaging as well as interventional radiology by eliminating the exposure to ionizing radiation allowing more complicated interventions to be image guided several other companies embraced the idea of open magnets. These instruments have started to proliferate and now occupy a significant portion of the market.

Open Field Magnetic Resonance Imaging D.H.W. Grönmeyer, R.B. Lufkin, 2000-09-20. Covers issues related to the practice of both diagnostic and interventional MRI on this new type of open design MR scanner. The unique configuration and often mid field strengths of these machines necessitates new strategies for both diagnostic and interventional procedures compared to that of the standard 1.5 tesla diagnostic only MR scanners to which the majority of the radiologic literature is addressed today. This broad multi authored work will appeal to radiologists medical physicists other physicians and health care personnel.

Procedures and Documentation for CT and MRI Roland Neseth, 2000. The second book in a four book series geared for the advanced exams taken by radiologic technologists. Written in response to the ARRT requirement for proof of competency in specific modalities prior to taking advanced level exams. In order to achieve competency in a specific modality the student must demonstrate complete and document performance of the specified competencies. The book lists the particular competency demonstrates how to perform the exercise and provides a documentation page for verification purposes. The book serves as a tool that Radiologic Technology students can carry from test to test and from site to site which not only reviews the upcoming test but also serves as an official recorder for documentation. Sample checklists supplied by the ARRT have also been incorporated into the book.
