*Magnetic Resonance Imaging In Foods* Michael McCarthy,2012-12-16 Nuclear magnetic

resonance imaging is one of several new experimental techniques which have recently been applied to food systems NMR in general and nuclear magnetic resonance imaging are powerful probes of the microscopic and macroscopic changes occurring in foods during processing storage and utilization The training that food scientists and food engineers have received in the past has often omitted specific courses in physical chemistry that form the theoretical and practical foundation necessary to fully utilize magnetic resonance experimental techniques The goal of *Magnetic Resonance Imaging in Foods* is to introduce food scientists and food engineers to magnetic resonance imaging and provide a basis for further study As such the book begins with two chapters of an introductory nature The first chapter introduces magnetic resonance phenomena NMR in general and MRI in detail Particular emphasis is given to the limitations and typical ranges available for studying particular phenomena for example the range of diffusivities that can be studied using commercial grade NMR equipment Chapter 2 gives a brief introduction to the classical physical model of NMR first introduced by Felix Bloch in 1946 and aspects important to the interpretation of MRI data This chapter is provided for the researchers and students interested in more details of the basic theory Chapter 2 can be skipped by those individuals not requiring more information on the basic theory of NMR The next several chapters of the book are on applications of MRI to food systems

*Magnetic Resonance in Food Science* María Guðjónsdóttir, P. S. Belton, Graham Alan Webb, 2009 The term magnetic resonance covers a wide range of techniques spectroscopy relaxation and imaging In turn these areas are evolving and leading to various new applications of NMR and ESR in food science and nutrition This book is part of the continuing series of proceedings of the biennial conferences on applications of magnetic resonance to food science As always the aim of the book is to bring the reader up to date with the state of the art of the subject The speakers came from Europe North and South America Asia and Australasia giving a global perspective to the event The range of the conference was broad covering sensory science authenticity functionality solid state methods and new methods *Magnetic Resonance in Food Science* is a global survey written by leading authorities It provides readers with an awareness of current activity in the field and potential applications
