

A GUIDE TO THE MAILLARD REACTION

The Maillard reaction occurs during cooking, and it is responsible for the non-enzymatic browning of foods when cooked. It actually consists of a number of reactions, and can occur at room temperature, but is optimal between 140-165°C. The Maillard reaction occurs in three stages, detailed here.

1

The carbonyl group on a sugar reacts with a protein or amino acid's amino group, producing an N-substituted glycosylamine.

2

The glycosylamine compound generated in the first step isomerises, by undergoing Amadori rearrangement, to give a ketosamine.

3

The ketosamine can react in a number of ways to produce a range of different products, which themselves can react further.

Classes of Maillard Reaction Products

The Maillard reaction produces hundreds of products; a small subset of these contribute to flavour and aroma, some groups of which are described below. Melanoidins are also formed; brown, polymeric substances which contribute to the colouration of many cooked foods.

The Science of Sugar Confectionery W. P. Edwards, 2000 Confectionery is a topic close to many people's hearts and its manufacture involves some interesting science. The confectionery industry is divided into three classes: chocolate, flour and sugar confectionery. It is the background science of this latter category that is covered in *The Science of Sugar Confectionery*. The manufacture of confectionery is not a science-based industry as these products have traditionally been created by skilled confectioners working empirically. In fact, scientific understanding of the production process has only been acquired retroactively. Historically, however, sugar confectionery has had technological synergies with the pharmaceutical industry, such as making sugar tablets and applying panned sugar coatings. This book gives an introduction to the subject with some basic definitions and commonly used ingredients and then moves on to discuss the chemistry of various types of sugar confectionery. These include sugar glasses, boiled sweets, grained sugar products, fondants, toffees and fudges, hydrocolloids, gums, pastilles and jellies and concludes with a chapter dedicated to sugar-free confectionery.

Flavours and Fragrances Ralf Günter Berger, 2007-03-06 This book is an introduction to the world of aroma chemicals, essential oils, fragrances and flavour compositions for the food, cosmetics and pharmaceutical industry. Present technology, the future use of resources and biotechnological approaches for the production of the respective chemical compounds are described. The book has an integrated and interdisciplinary approach on future industrial production and the issues related to this topic.

Cooking for Geeks Jeff Potter, 2010-07-20 Are you the innovative type, the cook who marches to a different drummer, used to expressing your creativity instead of just following recipes? Are you interested in the science behind what happens to food while it's cooking? Do you want to learn what makes a recipe work so you can improvise and create your own unique dish? More than just a cookbook, *Cooking for Geeks* applies your curiosity to discovery, inspiration and invention in the kitchen. Why is medium-rare steak so popular? Why do we bake some things at 350 F (175 C) and others at 375 F (190 C)? And how quickly does a pizza cook if we overclock an oven to 1 000 F (540 C)? Author and cooking geek Jeff Potter provides the answers and offers a unique take on recipes from the sweet, a mean chocolate chip cookie to the savory duck confit, sugo. This book is an excellent and intriguing resource for anyone who wants to experiment with cooking, even if you don't consider yourself a geek. Initialize your kitchen and calibrate your tools. Learn about the important reactions in cooking, such as protein denaturation, Maillard reactions and caramelization, and how they impact the foods we cook. Play with your food using hydrocolloids and sous vide cooking. Gain firsthand insights from interviews with researchers, food scientists, knife experts, chefs, writers and more, including author Harold McGee, TV personality Adam Savage, chemist Hervé This and xkcd. My own session with the book made me feel a lot more confident in my cooking.

Monica Racic, *The New Yorker* I LOVE this book. It's inspiring, invigorating and damned fun to spend time inside the mind of big picture cooking. I'm Hungry. Adam Savage, co-host of Discovery Channel's *MythBusters*. In his enchanting, funny and informative book *Cooking for Geeks*, O'Reilly Jeff Potter tells us why things work.

The Maillard Reaction John W. Baynes, Vincent M. Monnier, Jennifer M. Ames, Suzanne Thorpe, 2005-08-12 The Maillard reaction first described during the early 20th century originally referred to the browning reaction that occurs between amino acids and sugars during the cooking and processing of foods. This reaction contributes to the color, taste, aroma, and texture of foods and also affects their nutritional and toxicological properties. The Maillard reaction, which has been at the crossroads of food and biomedical sciences, is now also known to contribute to the natural and normal aging of tissue proteins and other biomolecules. It is also implicated in the pathologic processes of a range of age-related chronic diseases including arthritis, atherosclerosis, diabetes, and neurodegenerative diseases. The role of the Maillard reaction in diabetes and its complications has become a major focus of research, leading to a better understanding of the importance of oxidative stress, lipid peroxidation, and hyperlipidemia in diabetic complications. This volume addresses all of these issues from food to biomedical sciences and highlights current research trends, including the identification of new biomarkers, nutrition, and toxicology, and the role of oxidative stress, advanced glycoxidation, and lipoxidation end products (AGE, ALEs) in aging and chronic disease. The last section of the book, devoted to recent research on AGE/ALE inhibitors in animal models and clinical trials, assesses the current status of pharmaceutical interventions for retarding the Maillard reaction and the pathophysiology associated with aging and age-related disease.

Food Chemistry H.-D. Belitz, Werner Grosch, Peter Schieberle, 2009-01-15 For more than two decades, this work has remained the leading advanced textbook and easy-to-use reference on food chemistry and technology. Its fourth edition has been extensively re-written and enlarged, now also covering topics such as BSE detection, acrylamide, food allergies, alcoholic drinks, and phytosterols, and is now treated more extensively. Proven features of the prior editions are maintained. Contains more than 600 tables, almost 500 figures, and about 1100 structural formulae of food components. Logically organized according to food constituents and commodities. Comprehensive subject index. These features provide students and researchers in food science, food technology, agricultural chemistry, and nutrition with in-depth insight into food chemistry and technology. They also make the book a valuable on-the-job reference for chemists, food chemists, food technologists, engineers, biochemists, nutritionists, and analytical chemists in food and agricultural research, food industry, nutrition, food control, and service laboratories. From reviews of the first edition: Few books on food chemistry treat the subject as exhaustively; researchers will find it to be a useful source of information. It is easy to read, and the material is systematically presented. JACS
