Maintenance Of Knowledge Based Systems:

Maintenance of Knowledge-based Systems Frans Coenen, Trevor J. M. Bench-Capon, 1993 The practical take up of Knowledge Based Systems KBSs is usually described as disappointing One explanation of the reluctance of organisations to make a real commitment to these systems stems from the lack of well defined techniques to engineer them in an acceptable manner Without the assurance of quality that can be given by the use of a proven methodology the risk of investing substantially in these systems will remain a risk too great to be taken One of the chief manifestations of the lack of these techniques is that it is impossible to say with any assurance that it will be possible to maintain the systems so that their useful life can be extended This book is concerned with the maintenance of KBSs providing a balance between the academic and the practical and containing analysis of tools developed in a research project The intention of the book is to move from very general concerns available to all systems through to specific techniques and tools designed to address particular problems in particular representations before concluding with some more general remarks This book is essential reading for anyone whether in a commercial or academic environment who wishes to build a serious Knowledge Based System that will continue to be used over a period of time SPECIAL FEATURES Building a Knowledge Based System is not the end of the story the system must be used and during its period of use the knowledge on which it relies will change and develop A Knowledge Based System that is not to become rapidly obsolete must change and develop with it This book addresses this neglected area of maintenance emphasising the specific maintenance tasks required by a Knowledge Based System The book provides a balance between the academic and the practical and containing analysis of tools developed in a research project

Development of Knowledge-Based Systems for Engineering Carlo Tasso, Edoardo R. de Arantes e Oliveira, 2014-05-04 The goal of the volume is twofold to help engineers to understand the design and development process and the specific techniques utilized for constructing expert systems in engineering and secondly to introduce computer specialists to significant applications of knowledge based techniques in engineering Among the authors are world famous experts of engineering and knowledge based systems development Validation and Verification of Knowledge Based Systems Anca Vermesan, Frans Coenen, 2013-04-17 Knowledge based KB technology is being applied to complex problem solving and critical tasks in many application domains Concerns have naturally arisen as to the dependability of knowledge based systems KBS As with any software attention to quality and safety must be paid throughout development of a KBS and rigorous verification and validation V V techniques must be employed Research in V V of KBS has emerged as a distinct field only in the last decade and is intended to address issues associated with quality and safety aspects of KBS and to credit such applications with the same degree of dependability as conventional applications In recent years V V of KBS has been the topic of annual workshops associated with the main AI conferences such as AAAI IJACI and ECAI Validation and Verification of Knowledge Based Systems contains a collection of papers dealing with all aspects of KBS V V presented at the Fifth

Building Knowledge-Based Systems for Natural Resource Management Daniel L. Schmoldt, H. Michael Rauscher, 2012-12-06

If one were forced to use a single key word to describe the decade of the 1980s as a very prominent one would be technology. Leading the forefront of technology advancement were breakthroughs in electronics. Devices that were uncommon or unknown in 1980 became commonplace and almost indispensable by 1989. This trend has continued into the 1990s and it does not seem to be abating in any way. Microwave ovens, video recorders, telephone answering machines, compact disc players, computers, and a host of smaller or less sophisticated devices now appear in most households. The development of small and inexpensive computers, i.e. personal computers, has placed computing resources within reach of many more people. In addition, many traditional and largely mechanical devices have been enhanced by electronics. For example, specialized microprocessors are combined with arrays of electronic sensors to control and monitor sophisticated engineering components in most new automobiles. In this and many other ways, we are touched by the new electronics in almost every aspect of our daily lives. Initially, personal computers were little more than toys. They contained only a small fraction of the computing power of their immediate ancestors, the mini computers and mainframe computers. However, rapid improvements in integrated circuit design and chip manufacture produced regular reductions in size and cost of computer components. During the same time, processor speed and sophistication increased.

Knowledge Based Systems in Medicine: Methods, Applications and Evaluation Jan L. Talmon, John Fox, 2013-03-09

his volume of the series Lecture Notes in Medical Informatics contains the proceedings of the Workshop on System Engineering in Medicine which was held in Maastricht, The Netherlands, 16-18 March 1989. This workshop was sponsored by the EC under the framework of the Medical and Health Research Programme. The aim of the workshop was to assess whether there was sufficient support in the Medical Informatics community in the EC to establish a concerted action. This proceedings contain papers of the presentations given at the workshop. These presentations were centred around three themes: Methods and Tools, Applications in the domains of chronic care and critical care, Evaluation of decision support systems. The papers were prepared after the workshop and therefore we were able to include the relevant parts of the discussions which were related to the presentations. As a result of the discussions during the workshop, a proposal was prepared for the establishment of a concerted action specifically addressing the development of guidelines for the evaluation of medical decision aids. This proposal was granted early 1990 under the same Medical and Health Research programme of the EC. Over 40 institutes are participating in this concerted action. It has been the outstanding presentations and the open discussions at the workshop that have been the starting point of this concerted action. The papers in this proceedings formed a starting point for the discussions in the meetings of the concerted action.
