H. Adelaar,2004-06-10 The Andean and Pacific regions of South America are home to a remarkable variety of languages and language families with a range of typological differences This linguistic diversity results from a complex historical background comprising periods of

greater communication between different peoples and languages and periods of fragmentation and individual development The Languages of the Andes documents in a single volume the indigenous languages spoken and formerly spoken in this linguistically rich region as well as in adjacent areas Grouping the languages into different cultural spheres it describes their characteristics in terms of language typology language contact and the social perspectives of present day languages The authors provide both historical and contemporary information and illustrate the languages with detailed grammatical sketches Written in a clear and accessible style this book will be a valuable source for students and scholars of linguistics and anthropology alike

**Nonverbal Predication in Amazonian Languages** Simon E. Overall, Rosa Vallejos, Spike Gildea, 2018-08-15 This volume explores typological variation within nonverbal predication in Amazonian languages Using abundant data generally from original and extensive fieldwork on under described languages it presents a far more detailed picture of nonverbal predication constructions than previously published grammatical descriptions On the one hand it addresses the fact that current typologies of nonverbal predication are less developed than those of verbal predication on the other it provides a wealth of new data and analyses of Amazonian languages which are still poorly represented in existing typologies Several contributions offer historical insights either reconstructing the sources of innovative nonverbal predicate constructions or describing diachronic pathways by which constructions used for nonverbal predication spread to other functions in the grammar The introduction provides a modern typological overview and also proposes a new diachronic typology to explain how distinct types of nonverbal predication arise

**World Lexicon of Grammaticalization** Tania Kouteva, Bernd Heine, Bo Hong, 2019-08-08 Based on analysis of more than 1 000 languages this volume reconstructs more than 500 processes of grammatical change in the languages of the world

*The Native Languages of South America* Loretta O'Connor, Pieter Muysken, 2014-03-20 In South America indigenous languages are extremely diverse There are over one hundred language families in this region alone Contributors from around the world explore the history and structure of these languages combining insights from archaeology and genetics with innovative linguistic analysis The book aims to uncover regional patterns and potential deeper genealogical relations between the languages Based on a large scale database of features from sixty languages the book analyses major language families such as Tupian and Arawakan as well as the Quechua Aymara complex in the Andes the Isthmo Colombian region and the Andean foothills It explores the effects of historical change in different grammatical systems and fills gaps in the World Atlas of Language Structures WALS database where South American languages are underrepresented An important resource for students and researchers interested in linguistics anthropology and language evolution

Though formerly one of the linguistically least known areas of the world extensive descriptive and historical linguistic research in recent years has expanded knowledge greatly These advances are represented in this volume in indepth treatments by the foremost scholars in the field with chapters on the history of investigation language classification language endangerment language contact typology phonology and phonetics and on major language families and regions of South America

**Number □ Constructions and Semantics** Anne Storch, Gerrit J. Dimmendaal, 2014-03-19 This book is the outcome of several decades of research experience with contributions by leading scholars based on long term field research It combines approaches from descriptive linguistics anthropological linguistics socio historical studies areal linguistics and social anthropology The key concern of this ground breaking volume is to investigate the linguistic means of expressing number and countable amounts which differ greatly in the world s languages It provides insights into common number marking devices and their not so common usages but also into phenomena such as the absence of plurals or transnumeral forms The different contributions to the volume show that number is of considerable semantic complexity in many languages worldwide expressing all kinds of extendedness multiplicity salience size and so on This raises a number of challenging questions regarding what exactly is described under the slightly monolithic label of number in most descriptive approaches to the languages of the world

The Oxford Handbook of Modality and Mood Jan Nuyts, Johan van der Auwera, 2016 This handbook offers an in depth and comprehensive state of the art survey of the linguistic domains of modality and mood An international team of experts in the field examine the full range of methodological and theoretical approaches to the many facets of the phenomena involved Following an opening section that provides an introduction and historical background to the topic the volume is divided into five parts Parts 1 and 2 present the basic linguistic facts about the systems of modality and mood in the languages of the world covering the semantics and the expression of different subtypes of modality and mood respectively The authors also examine the interaction of modality and mood mutually and with other semantic categories such as aspect time negation and evidentiality In Part 3 authors discuss the features of the modality and mood systems in five typologically different language groups while chapters in Part 4 deal with wider perspectives on modality and mood diachrony areality first language acquisition and sign language Finally Part 5 looks at how modality and mood are handled in different theoretical approaches formal syntax functional linguistics cognitive linguistics and construction grammar and formal semantics

Aikhenvald, 2025-03-21 This book explores the range of noun categorization devices found in the languages of the world from the numeral classifier systems of Southeast Asia to the highly grammaticalized gender agreement classes in Indo European languages It shows how these devices provide unique insights into how people categorize the world through the language
