**The Chemistry of Vanadium, Niobium and Tantalum** R. J. H. Clark, D. Brown, 2013-10-08 The Chemistry of Vanadium Niobium and Tantalum gives a comprehensive discussion on the discovery origin and metallurgical aspects of vanadium niobium and tantalum A section is also focused on the nuclear properties as well as the physical and chemical properties of each compound The history and distribution of vanadium niobium and tantalum are explored along with the purification and extraction procedures of the said elements The book also explores the derivative compounds such as the alloys hydride halides and oxides Another section of the book is focused on the physical and chemical modifications of the elements that generate such by products as the cyanides hydroxides and sulfides Different complexes of the elements such as halogeno and oxyhalogeno complexes are discussed in detail The organometallic chemistry of niobium tantalum and vanadium are also identified The book will be a useful tool for chemical engineers chemical scientists and students in the field of chemistry

**Advanced Inorganic Chemistry** Narayan S. Hosmane, 2017-04-27 Advanced Inorganic Chemistry Applications in Everyday Life connects key topics on the subject with actual experiences in nature and everyday life Differing from other foundational texts with this emphasis on applications and examples the text uniquely begins with a focus on the shapes geometry dictating intermolecular forces of attractions leading to reactivity between molecules of different shapes From this foundation the text explores more advanced topics such as Ligands and Ligand Substitution Processes with an emphasis on Square Planar Substitution and Octahedral Substitution Reactions in Inorganic Chemistry and Transition Metal Complexes with a particular focus on Crystal Field and Ligand Field Theories Electronic States and Spectra and Organometallic Bioinorganic Compounds including Carboranes and Metallocarboranes and their applications in Catalysis Medicine and Pollution Control Throughout the book illustrative examples bring inorganic chemistry to life For instance biochemists and students will be interested in how coordination chemistry between the transition metals and the ligands has a direct correlation with cyanide or carbon monoxide poisoning strong field Cyanide or CO ligand versus weak field Oxygen molecule Engaging discussion of key concepts with examples from the real world Valuable coverage from the foundations of chemical bonds and stereochemistry to advanced topics such as organometallic bioinorganic carboranes and environmental chemistry Uniquely begins with a

focus on the shapes geometry dictating intermolecular forces of attractions leading to reactivity between molecules of different shapes

**Index to Reviews, Symposia Volumes and Monographs in Organic Chemistry** Norman Kharasch, Walter Wolf, Elaine C. P. Harrison, 2013-10-22 Index to Reviews Symposia Volumes and Monographs in Organic Chemistry for the Period 1940 1960 presents a resume of published monographs reviews and symposia lectures in organic chemistry The editors adopted the plan of listings by symposia volume or journal backed up by the total subject and author indexes In this way the user can readily locate a particular article through the author index or the subject index or should he recall that an article appeared in a particular source the chronological listing in that source can be scanned quickly The Index gives a convenient overview of the accomplishments of organic chemists during this very prolific period of the growth of the field Frequently several articles on the same or similar subject appear hence the historical perspective can be sensed by rapid evaluation of the reviews selected This Index will be useful to research workers teachers and students It will also assist editors and authors to select specific areas which require critical review

**Inorganic Chemistry** Gary Wulfsberg, 2000-03-16 Both elementary inorganic reaction chemistry and more advanced inorganic theories are presented in this one textbook while showing the relationships between the two

**Comprehensive Inorganic Chemistry: Group IB, Group IIB, Group IIIA, Group IVA, Group VA, Group VIA, Group VIIA, Group VIII** John Christian Bailar, A. F. Trotman-Dickenson, 1973

*The Chemical Bond III* D. Michael P. Mingos, 2016-10-06 The series Structure and Bonding publishes critical reviews on topics of research concerned with chemical structure and bonding The scope of the series spans the entire Periodic Table and addresses structure and bonding issues associated with all of the elements It also focuses attention on new and developing areas of modern structural and theoretical chemistry such as nanostructures molecular electronics designed molecular solids surfaces metal clusters and supramolecular structures Physical and spectroscopic techniques used to determine examine and model structures fall within the purview of Structure and Bonding to the extent that the focus is on the scientific results obtained and not on specialist information concerning the techniques themselves Issues associated with the development of bonding models and generalizations that illuminate the reactivity pathways and rates of chemical processes are also relevant The individual volumes in the series are thematic The goal of each volume is to give the reader whether at a university or in industry a comprehensive overview of an area where new insights are emerging that are of interest to a larger scientific audience Thus each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole The most significant developments of the last 5 to 10 years should be presented using selected examples to illustrate the principles discussed A description of the physical basis of the

experimental techniques that have been used to provide the primary data may also be appropriate if it has not been covered in detail elsewhere. The coverage need not be exhaustive in data but should rather be conceptual, concentrating on the new principles being developed that will allow the reader who is not a specialist in the area covered to understand the data presented. Discussion of possible future research directions in the area is welcomed. Review articles for the individual volumes are invited by the volume editors.
