Nomogenesis Or Evolution Determined by Law ,1969 **Nomogenesis; or evolution determined by law, tr** Lev Semenovich Berg, Orthogenesis versus Darwinism Igor Popov,2018-08-22 This book reviews the convoluted history of orthogenesis with an emphasis of non English sources untangles relationships between various concepts of directed evolution and argues whether orthogenesis has something to offer modern biology Darwinism claims that evolution occurs by selection from an extensive random variability An alternative viewpoint that the material for variability is limited and organisms are predisposed to vary in certain directions is the essence of evolutionary concepts that can be grouped together under the name of orthogenesis Dating back to Lamarck orthogenesis has existed in many guises Branded as mystical and discarded as unscientific it keeps re emerging in evolutionary discussions **Nomogenesis of evolution determined by law** Lev S. Berg,1969 Radiation Risk Estimates in Normal and Emergency Situations Arrigo A. Cigna,Marco Durante,2007-05-22 This book follows up a 2005 International Conference in Yerevan Armenia dedicated to the 70th anniversary of the 1935 publication of the green paper by N W Timofeeff Ressovsky K Zimmer and M Delbruck entitled On the origin of gene mutations and gene structure This was the starting point of the NATO Advanced Research Workshop whose proceedings are published in this book with papers dealing directly with Timofeeff Ressovsky s life and the green pamphlet **Ecodynamics** C. A. Brebbia,2012 This book contains a series of outstanding contributions on ecodynamics that appeared in limited editions before the emergence of the International Journal of Design Nature and Ecodynamics which has now become the primary focus for this area of research The aim of ecodynamics is to relate ecosystems to evolutionary thermodynamics which can lead to appropriate solutions for sustainable development The contributions published in this volume relate to all aspects of ecosystems and sustainable development ranging from physical sciences to economics and epistemology The world of ecosystems has been dominated by the towering personality of Ilya Prigogine to whom this volume is dedicated The first article is an extract from his autobiography written shortly before he died Prigogine s ideas are directly reflected in many of the contributions in this volume He helped set up numerous research groups all around the world including that at Siena University headed by the late Enzo Tiezzi He also influenced the work of Sven Jorgensen Bernard Patten Robert Ulanowicz Simone Bastianoni Nadia Marchettini Ricardo Pulselli T S Chon to name just a few amongst the many authors contributing to this volume This compilation of influential papers currently unavailable in the open literature will make an important contribution to the field of ecodynamics Semiotic Agency Alexei Sharov,Morten Tønnessen,2022-02-08 This book invites readers to embark on a journey into the world of agency encompassing humans other organisms cells intracellular molecular agents colonies populations ecological systems and artificial autonomous systems We combine mechanistic and non mechanistic approaches in the analysis of the function and evolution of organisms their subagents and multi organism

systems and in this way offer a theoretical platform for integrating biosemiotics with both natural science and the humanities social sciences Agents are autonomous systems that incorporate knowledge on how to make sense of their environment and use it to achieve their goals The functions of all agents are supported by mechanisms at the lowest level however the explanatory power of mechanistic analysis is not sufficient for complex agents Non mechanistic methods rely on the goal directedness of agents whose dynamics follow self stabilized dynamic attractors The properties of attractors depend on stable or slowly changing factors and such dependencies can be interpreted as sign relations if they are adaptive in nature Agents can replace or redirect mechanisms on demand in order to preserve their functions for performing higher level semiotic functions mechanisms are thus only means We assume that mechanism and semiosis are not mutually exclusive and that simple agents can interpret signs mechanistically This assumption allows us to extend semiotic analysis to all agents including ribosomes in cells computers and robots This book challenges established traditions in natural science and the humanities social sciences semiotics no longer appears as restricted to humans and rational thinking and biology is no longer limited to rely exclusively on mechanistic reasoning The Limits of Structuralism James McElvenny,2023 Based around seven primary texts spanning 130 years this volume explores the conceptual boundaries of structuralism The texts are made accessible to present day English speaking readers through translation and extensive critical notes each text is also accompanied by a detailed introduction that places it in its intellectual and historical context and outlines the insights it contains Jacket The Fight to Save the Redwoods Susan R. Schrepfer,2003-04-01 This is not a simple or ordinary history of a conservation crusade Schrepfer very ably traces the changes in scientific wisdom from nineteenth century romanticism and teleological evolutionism to more current ecological dynamism and the influence of those intellectual developments on political history The subject is important much broader than the title suggests and so is the book American Historical Review

Revisiting the Eclipse of Darwinism Michał Jakub Wagner,2024-11-01 This book focuses on a critical reexamination of two prominent categories used in modern historiography of biology the eclipse of Darwinism and the modern synthesis The main objective is to critically analyze the main existing interpretations of the eclipse of Darwinism and emergence of the modern synthesis with particular emphasis on the philosophical assumptions adopted in these interpretations Thus interpretations by Ernst Mayr Peter Bowler Mark Largent and modern historians who challenge these perspectives are discussed and critically evaluated The analysis of the above interpretations makes it possible to determine how the philosophy of science limits the interpretation of the history of a given field and also serves as a starting point for proposing an original interpretation of the above period in the history of evolutionary biology The ultimate goal will therefore be a proposal of a new interpretative perspective to answer following questions Why did the eclipse of the Darwinism occur How should its origins to be understood Why did it end and why did the modern synthesis emerge Main thesis of this book is that the eclipse was a direct response to inconsistent ontology upon which Darwin built his theory of evolution Darwin referred to

terms and concepts rooted in the philosophy of essentialism which was problematic because he tried to apply these essentialist concepts to his vision of the ever changing nature Therefore all of the anti Darwinian theories characteristic to the eclipse of Darwinism and later to the modern synthesis were produced in an attempt to reconcile essentialism with evolution and thus to correct Darwin s philosophical error The book will appeal to biologists philosophers and historians alike

The Annual Register of World Events Edmund Burke,1927 *The Annual Register* Edmund Burke,1927 Continuation of the reference work that originated with Robert Dodsley written and published each year which records and analyzes the year s major events developments and trends in Great Britain and throughout the world From the 1920s volumes of *The Annual Register* took the essential shape in which they have continued ever since opening with the history of Britain then a section on foreign history covering each country or region in turn Following these are the chronicle of events brief retrospectives on the year s cultural and economic developments a short selection of documents and obituaries of eminent persons who died in the year *Ecological Genetics* E. B. Ford,2012-12-06 This book describes the experimental study of evolution and

adaptation carried out by means of combined field work and laboratory genetics That technique has been developed during the last forty years or so by my colleagues and myself and by a small but increasing number of geneticists throughout the world In discussing what has been achieved by these means many relevant pieces of work familiar to me have been omitted while doubtless there are others that have escaped my attention To those who have thus laboured without recognition here I offer my apologies Yet I would not include further examples were I writing again and this for two reasons First my aim is not to produce a com pendium in the German fashion for I have endeavoured to develop principles with enough instances to illustrate them but no more Secondly this book is in danger of becoming too long as it is one which is in general consulted only in libraries not read familiarly by students **What Makes Biology Unique?** Ernst Mayr,2007-04-16 This book a

collection of essays written by the most eminent evolutionary biologist of the twentieth century explores biology as an autonomous science offers insights on the history of evolutionary thought critiques the contributions of philosophy to the science of biology and comments on several of the major ongoing issues in evolutionary theory Notably Mayr explains that Darwin s theory of evolution is actually five separate theories each with its own history trajectory and impact Natural selection is a separate idea from common descent and from geographic speciation and so on A number of the perennial Darwinian controversies may well have been caused by the confounding of the five separate theories into a single composite Those interested in evolutionary theory or the philosophy and history of science will find useful ideas in this book which should appeal to virtually anyone with a broad curiosity about biology **Biological Emergences** Robert G. B.

Reid,2009-08-21 A critique of selectionism and the proposal of an alternate theory of emergent evolution that is causally sufficient for evolutionary biology Natural selection is commonly interpreted as the fundamental mechanism of evolution Questions about how selection theory can claim to be the all sufficient explanation of evolution often go unanswered by today

s neo Darwinists perhaps for fear that any criticism of the evolutionary paradigm will encourage creationists and proponents of intelligent design In *Biological Emergences* Robert Reid argues that natural selection is not the cause of evolution He writes that the causes of variations which he refers to as natural experiments are independent of natural selection indeed he suggests natural selection may get in the way of evolution Reid proposes an alternative theory to explain how emergent novelties are generated and under what conditions they can overcome the resistance of natural selection He suggests that what causes innovative variation causes evolution and that these phenomena are environmental as well as organismal After an extended critique of selectionism Reid constructs an emergence theory of evolution first examining the evidence in three causal arenas of emergent evolution symbiosis association evolutionary physiology behavior and developmental evolution Based on this evidence of causation he proposes some working hypotheses examining mechanisms and processes common to all three arenas and arrives at a theoretical framework that accounts for generative mechanisms and emergent qualities Without selectionism Reid argues evolutionary innovation can more easily be integrated into a general thesis Finally Reid proposes a biological synthesis of rapid emergent evolutionary phases and the prolonged dynamically stable non evolutionary phases imposed by natural selection

Natural Selection Richard G. Delisle, 2021-02-27 This book contests the general view that natural selection constitutes the explanatory core of evolutionary biology It invites the reader to consider an alternative view which favors a more complete and multidimensional interpretation It is common to present the 1930-1960 period as characterized by the rise of the Modern Synthesis an event structured around two main explanatory commitments

- 1 Gradual evolution is explained by small genetic changes variations oriented by natural selection a process leading to adaptation
- 2 Evolutionary trends and speciation events are macroevolutionary phenomena that can be accounted for solely in terms of the extension of processes and mechanisms occurring at the previous microevolutionary level

On this view natural selection holds a central explanatory role in evolutionary theory one that presumably reaches back to Charles Darwin's *Origin of Species* a view also accompanied by the belief that the field of evolutionary biology is organized around a profound divide theories relying on strong selective factors and those appealing only to weak ones If one reads the new analyses presented in this volume by biologists historians and philosophers this divide seems to be collapsing at a rapid pace opening an era dedicated to the search for a new paradigm for the development of evolutionary biology Contrary to popular belief scholars position on natural selection is not in itself a significant discriminatory factor between most evolutionists In fact the intellectual space is quite limited if not non-existent between on the one hand Darwinists who play down the central role of natural selection in evolutionary explanations and on the other hand non-Darwinists who use it in a list of other evolutionary mechanisms The mechanism-centered approach to evolutionary biology is too incomplete to fully make sense of its development In this book the labels created under the traditional historiography Darwinian Revolution Eclipse of Darwinism Modern Synthesis Post-Synthetic Developments are thus re-evaluated This book will not only appeal to researchers working

in evolutionary biology but also to historians and philosophers **Publications of the Wagner Free Institute of Science**
