Chapman, Sarah Glaz, 2000-10-31 This volume consists of twenty one articles by many of the most prominent researchers in non Noetherian commutative ring theory The articles combine in various degrees surveys of past results recent results that have never before seen print open problems and an extensive bibliography One hundred open problems supplied by the authors have been collected in the volume s concluding chapter The entire collection provides a comprehensive survey of the development of the field over the last ten years and points to future directions of research in the area Audience Researchers and graduate students the volume is an appropriate source of material for several semester long graduate level seminars and courses

Non-Noetherian Commutative Ring Theory S. T. Chapman, Sarah Glaz, 2014-01-15

Non-Noetherian Commutative Ring Theory S.T. Chapman, Sarah Glaz, 2013-03-09 Commutative Ring Theory emerged as a distinct field of research in mathematics only at the beginning of the twentieth century It is rooted in nineteenth century major works in Number Theory and Algebraic Geometry for which it provided a useful tool for proving results From this humble origin it flourished into a field of study in its own right of an astonishing richness and interest Nowadays one has to specialize in an area of this vast field in order to be able to master its wealth of results and come up with worthwhile contributions One of the major areas of the field of Commutative Ring Theory is the study of non Noetherian rings The last ten years have seen a lively flurry of activity in this area including a large number of conferences and special sections at national and international meetings dedicated to presenting its results an abundance of articles in scientific journals and a substantial number of books capturing some of its topics This rapid growth and the occasion of the new Millennium prompted us to embark on a project aimed at presenting an overview of the recent research in the area With this in mind we invited many of the most prominent researchers in Non Noetherian Commutative Ring Theory to write expository articles representing the most recent topics of research in this area

Non-Commutative Ring Theory Surender K. Jain, Sergio R. Lopez-Permouth, 2006-11-14 The papers of this volume share as a common goal the structure and classification of noncommutative rings and their modules and deal with topics of current research including localization serial rings perfect endomorphism rings quantum groups Morita contexts generalizations of injectivity and Cartan matrices

Commutative Ring Theory Hideyuki Matsumura, 1989-05-25 This book explores commutative ring theory an important foundation for algebraic geometry and complex analytical geometry

Ideal Theory of Commutative Rings and Monoids Franz Halter-Koch, 2025-06-14 This book offers a concise treatment of multiplicative ideal theory in the language of multiplicative monoids It presents a systematic development of the theory of weak ideal systems and weak module systems on arbitrary commutative monoids Examples of monoids that are investigated include but are not limited to Mori monoids Laskerian monoids Prüfer monoids and Krull monoids An in depth study of various constructions from ring theory is also provided with an emphasis on polynomial rings Kronecker function rings and Nagata rings The target audience

is graduate students and researchers in ring and semigroup theory

Commutative Algebra James W. Brewer, Sarah Glaz, William Heinzer, Bruce Olberding, 2006-12-15 For over forty years Robert Gilmer's numerous articles and books have had a tremendous impact on research in commutative algebra It is not an exaggeration to say that most articles published today in non-Noetherian ring theory and some in Noetherian ring theory as well originated in a topic that Gilmer either initiated or enriched by his work This volume a tribute to his work consists of twenty-four articles authored by Robert Gilmer's most prominent students and followers These articles combine surveys of past work by Gilmer and others recent results which have never before seen print open problems and extensive bibliographies In a concluding article Robert Gilmer points out directions for future research highlighting the open problems in the areas he considers of importance Robert Gilmer's article is followed by the complete list of his published works his mathematical genealogical tree information on the writing of his four books and reminiscences about Robert Gilmer's contributions to the stimulating research environment in commutative algebra at Florida State in the middle 1960s The entire collection provides an in-depth overview of the topics of research in a significant and large area of commutative algebra
Commutative Algebra Marco Fontana, Sophie Frisch, Sarah Glaz, 2014-07-15 This volume presents a multi-

dimensional collection of articles highlighting recent developments in commutative algebra It also includes an extensive bibliography and lists a substantial number of open problems that point to future directions of research in the represented subfields The contributions cover areas in commutative algebra that have flourished in the last few decades and are not yet well represented in book form Highlighted topics and research methods include Noetherian and non-Noetherian ring theory as well as integer-valued polynomials and functions Specific topics include Homological dimensions of Prüfer-like rings Quasi-complete rings Total graphs of rings Properties of prime ideals over various rings Bases for integer-valued polynomials

Boolean subrings The portable property of domains Probabilistic topics in Intn D Closure operations in Zariski Riemann spaces of valuation domains Stability of domains Non Noetherian grade Homotopy in integer valued polynomials Localizations of global properties of rings Topics in integral closure Monoids and submonoids of domains The book includes twenty articles written by many of the most prominent researchers in the field Most contributions are authored by attendees of the conference in commutative algebra held at the Graz University of Technology in December 2012 There is also a small collection of invited articles authored by those who did not attend the conference Following the model of the Graz conference the volume contains a number of comprehensive survey articles along with related research articles featuring recent results that have not yet been published elsewhere

Commutative Algebra Marco Fontana, Salah-Eddine Kabbaj, Bruce Olberding, Irena Swanson, 2010-09-29 Commutative algebra is a rapidly growing subject that is developing in many different directions This volume presents several of the most recent results from various areas related to both Noetherian and non Noetherian commutative algebra This volume contains a collection of invited survey articles by some of the leading experts in the field The authors of these chapters have been carefully selected for their important contributions to an area of commutative algebraic research Some topics presented in the volume include generalizations of cyclic modules zero divisor graphs class semigroups forcing algebras syzygy bundles tight closure Gorenstein dimensions tensor products of algebras over fields as well as many others This book is intended for researchers and graduate students interested in studying the many topics related to commutative algebra

Progress in Commutative Algebra 2 Christopher Francisco, Lee C. Klingler, Sean M. Sather-Wagstaff, Janet C. Vassilev, 2012-04-26 This is the second of two volumes of a state of the art survey article collection which originates from three commutative algebra sessions at the 2009 Fall Southeastern American Mathematical Society Meeting at Florida Atlantic University The articles reach into diverse areas of commutative algebra and build a bridge between Noetherian and non Noetherian commutative algebra These volumes present current trends in two of the most active areas of commutative algebra non noetherian rings factorization ideal theory integrality and noetherian rings the local theory graded situation and interactions with combinatorics and geometry This volume contains surveys on aspects of closure operations finiteness conditions and factorization Closure operations on ideals and modules are a bridge between noetherian and nonnoetherian commutative algebra It contains a nice guide to closure operations by Epstein but also contains an article on test ideals by Schwede and Tucker and one by Enescu which discusses the action of the Frobenius on finite dimensional vector spaces both of which are related to tight closure Finiteness properties of rings and modules or the lack of them come up in all aspects of commutative algebra However in the study of non noetherian rings it is much easier to find a ring having a finite number of prime ideals The editors have included papers by Boynton and Sather Wagstaff and by Watkins that discuss the relationship of rings with finite Krull dimension and their finite extensions Finiteness properties in commutative group rings are discussed in Glaz and Schwarz s paper And Olberding s selection presents us with

constructions that produce rings whose integral closure in their field of fractions is not finitely generated The final three papers in this volume investigate factorization in a broad sense The first paper by Celikbas and Eubanks Turner discusses the partially ordered set of prime ideals of the projective line over the integers The editors have also included a paper on zero divisor graphs by Coykendall Sather Wagstaff Sheppardson and Spiroff The final paper by Chapman and Krause concerns non unique factorization
