Non-Archimedean Utility Theory Heinz J. Skala, 1975

Non-Archimedean Utility Theory Heinz J. Skala, 2012-12-06

My interest in non Archimedean utility theory and the problems related to it was aroused by discussions which I have had with Professors Werner Leinfellner and G nter Menges On the occasion of the Second Inter national Game Theory Workshop Berkeley 1970 which was sponsored by the National Science Foundation I had the opportunity to report about a result on non standard utilities Work on this subject continued when I was a research assistant of Professor G nter Menges at the Uni versity of Heidelberg The present mono graph is essentially a translation of my habilitation thesis which was accepted on February 15 1973 by the Faculty of Economics and Social Sciences at the Universtity of Heidelberg On translating my thesis I took up some suggestions made by Professor Werner B ge from the Faculty of Mathematics at the Uni versity of Heidelberg Through lack of time many of his ideas have not been taken into consideration but I hope to do so in a future paper The first chapter should be considered as a short introduction to pref erence orderings and to the notion of a utility theory proposed by Dana Scott and Patrick Suppes In the second chapter I discuss in some detail various problems of ordinal utility theory Except when introducing non standard models of the reals no use is made of concepts of model theory This is done in deference to those readers who do not wish to be troubled by formal languages and model theory Patrick Suppes: Scientific Philosopher P. Humphreys, 2012-12-06 Patrick Suppes is a philosopher and scientist whose contributions range over probability and statistics mathematical and experimental psychology the foundations of physics education theory the philosophy of language measurement theory and the philosophy of science He has also been a pioneer in the area of computer assisted instruction In each of these areas Suppes has provided seminal ideas that in some cases led to shaping the direction of research in the field The papers contained in this collection were commissioned with the mandate of advancing research in their respective fields rather than retrospectively surveying the contributions that Suppes himself has made The authors form an interesting mixture of researchers in both formal philosophy of science and science itself all of whom have been inspired by his ideas To maintain the spirit of constructive dialogue that characterizes Suppes s intellectual style he has written individual responses to each article In Volume 1 Probability and Probabilistic Causality nineteen distinguished philosophers and scientists focus their attention on probabilistic issues In Part I the contributors explore axiomatic representations of probability theory including qualitative and interval valued probabilities as well as traditional point valued probabilities Belief structures and the dynamics of belief are also treated in detail In Part II the rapidly growing field of probabilistic causation is assessed from both formal and empirical viewpoints For probability theorists statisticians economists philosophers of science psychologists and those interested in the foundations of mathematical social science In Volume 2 Philosophy of Physics Theory Structure and Measurement Theory fifteen distinguished philosophers and scientists cover a wide variety of topics Part III covers issues in quantum theory geometry classical mechanics and computational

physics Part IV explores Suppes's well known set theoretic account of scientific theories which has served him well throughout his career Suppes's contributions to measurement theory have been widely used in mathematical psychology and elsewhere and this material is the subject of Part V For physicists logicians workers in mathematical social science and philosophers of science In Volume 3 Philosophy of Language and Logic Learning and Action Theory fourteen distinguished philosophers and scientists explore issues in the philosophy of language logic and philosophical psychology Suppes's suggestions that quantum theory requires a rethinking of classical logic form a particularly sharp account of that controversial thesis and Part VI deals with this issue together with topics in the philosophy of language and logic including relational grammars and anaphora Part VII deals with issues in psychology action theory and robotics while Part VIII concludes with a general survey of Suppes's views in the philosophy of science A comprehensive chronological and topical bibliography of Suppes's writings is included in this volume For philosophers of language theoretical linguists logicians workers in mathematical social sciences and philosophers of science

Decision Theory and Social Ethics H.W. Gottinger, W. Leinfellner, 2012-12-06 Ethics as one of the most respectable disciplines of philosophy has

undergone a drastic and revolutionary change in recent time There are three main trends of this development The first trend can be described as a tendency towards a rigorous formal and analytical language This means simply that ethics has created beside its own formalized set theoretical language a variety of new formalized logical and mathematical methods and concepts Thus ethics has become a formalized meta or epidiscipline which is going to replace the traditional concepts principles and ethical methods in the realm of social sciences It is clear that a formalized form of ethics can be used more easily in social economic and political theories if there are ethical conflicts to be solved This first trend can be regarded as a *conditio sine qua non* for application in and imposing ethical solutions on social scientific theories The second trend may be characterized as an association or unification tendency of a formalized and analytical ethics with decision theory Decision theory as a new interdisciplinary of social sciences is actually an assemblage of a variety of subtheories such as value utility theory game theory collective decision theory etc Harsanyi has called this complex of subtheories a general theory of human behavior Analytical or formal ethics is actually using this general theory of human behavior as a vehicle simply because this theory deals from the beginning with conflict solution i e

Theory of Categorical Conversion Kofi Kissi

Dompere, 2017-02-16 The Theory of Categorical Conversion is advanced by Professor Kofi Kissi Dompere as mathematical philosophical and game theoretic foundations to solve the problem of socio natural transformation as governed by some internal process in relation to Marx Schumpeter and Nkrumah Dompere's methodology is based on the Africentric principles of opposites made up of actual potential polarity negative positive duality with relational continuum and unity under cost benefit rationality and Asantefi Anoma principle supported by fuzzy paradigm of thought Socio natural transformations are seen in terms of game theories in a fuzzy stochastic space admitting of defective deceptive information structures in quality quantity space within the subjective objective duality The main premise of the monograph is that there exists a set of necessary and sufficient conditions for internal self transformation The necessary conditions are made up of categorical moments and categorical transfer functions forming the domain of control instrumentation in creating the sufficient conditions for categorical conversion processes Dompere presents an important methodological framework for the study and construction of the theories of socioeconomic development and political change as well as info dynamics connecting knowledge sciences innovation and engineering to the space of knowing under qualitative quantitative transformational dynamics with defective deceptive information structures in the games for power and dominance by duals and poles in conflicts The necessary conditions of socio natural transformation are internally derived based on the relational structure of matter energy information activities within the dynamics of qualitative dispositions of dualities of actual potential polarities The theory consists of category formation showing ontological epistemological categories and categorical dynamics shows elemental conversions of categorical varieties in a continuum The logical tools and the paradigm of thought for the theoretical development of Nkrumah's framework involve self excitement self correction and self control systems induced by internal

contradictions The set of necessary conditions constitutes the natural necessity that constrains cognitive freedom in socio natural transformations Had this conceptual system been familiar to economists and social scientists the construct of the theories of socioeconomic development and transformations would have been increasingly successful **Foundations of**

Measurement: Representation, axiomatization, and invariance Robert Duncan Luce, Patrick Suppes, David H.

Krantz, 2007-01-01 All of the sciences physical biological and social have a need for quantitative measurement This influential series Foundations of Measurement established the formal basis for measurement justifying the assignment of numbers to objects in terms of their structural correspondence Volume I introduces the distinct mathematical results that serve to formulate numerical representations of qualitative structures Volume II extends the subject in the direction of geometrical threshold and probabilistic representations and Volume III examines representation as expressed in axiomatization and invariance **Foundations of Measurement** R Duncan Luce, 2014-06-28 From the Foreword is infinite in multitude and I

mean by the sand not only that which exists about Syracuse and the rest of Sicily but also that which is found in every region whether inhabited or uninhabited Again there are some who without regarding it as infinite yet think that no number has been named which is great enough to exceed its multitude And it is clear that they who hold this view if they imagined a mass made up of sand in other respects as large as the mass of the earth including in it all the seas and the hollows of the earth filled up to a height equal to that of the highest mountains would be many times further still from recognizing that any number could be expressed which exceeded the multitude of the sand so taken But I will try to show you by means of geometrical proofs which you will be able to follow that of the numbers named by me and given in the work which I sent to Zeuxippus some exceed not only the number of the mass of sand equal in magnitude to the earth filled up in the way described but also that of a mass equal in magnitude to the universe See Table of Contents and MAQ **Axiomatic Utility**

Theory under Risk Ulrich Schmidt, 2012-12-06 The first attempts to develop a utility theory for choice situations under risk were undertaken by Cramer 1728 and Bernoulli 1738 Considering the famous St Petersburg Paradox a lottery with an infinite expected monetary value Bernoulli 1738 p 209 observed that most people would not spend a significant amount of money to engage in that gamble To account for this observation Bernoulli 1738 pp 199 201 proposed that the expected monetary value has to be replaced by the expected utility moral expectation as the relevant criterion for decision making under risk However Bernoulli's 2 argument and particularly his choice of a logarithmic utility function seem to be rather arbitrary since they are based entirely on intuitively 3 appealing examples Not until two centuries later did von Neumann and Morgenstern 1947 prove that if the preferences of the decision maker satisfy certain assumptions they can be represented by the expected value of a real valued utility function defined on the set of consequences Despite the identical mathematical form of expected utility the theory of von Neumann and Morgenstern and Bernoulli's approach have however I For comprehensive discussions of this paradox cf Menger 1934 Samuelson 1960 1977 Shapley 1977a Aumann 1977 Jorland 1987 and Zabell 1987 2 Cramer

Tuomela,2012-12-06 It is somewhat surprising to find out how little serious theorizing there is in philosophy and in social psychology as well as sociology on the nature of social actions or joint actions in the sense of actions performed together by several agents Actions performed by single agents have been extensively discussed both in philosophy and in psychology There is accordingly a booming field called action theory in philosophy but it has so far strongly concentrated on actions performed by single agents only We of course should not forget game theory a discipline that systematically studies the strategic interaction between several rational agents Yet this important theory besides being restricted to strongly rational acting fails to study properly several central problems related to the conceptual nature of social action Thus it does not adequately clarify and classify the various types of joint action except perhaps from the point of view of the agents utilities This book presents a systematic theory of social action Because of its reliance on so called purposive causation and generation it is called the purposive causal theory This work also discusses several problems related to the topic of social action for instance that of how to create from this perspective the most central concepts needed by social psychology and sociology While quite a lot of ground is covered in the book many important questions have been left unanswered and many others unasked as well **Operations Research '93** Achim Bachem,Ulrich Derigs,Michael Jünger,Rainer
