Noncommutative Harmonic Analysis In Honor Of Jacques Carmona:

Noncommutative Harmonic Analysis Patrick Delorme, Michèle Vergne, 2012-12-06 Dedicated to Jacques Carmona an expert in noncommutative harmonic analysis the volume presents excellent invited refereed articles by top notch mathematicians Topics cover general Lie theory reductive Lie groups harmonic analysis and the Langlands program automorphic forms and Kontsevich quantization Good text for researchers and grad students in representation theory

Non-Commutative Harmonic Analysis Michèle Vergne, Jacques Carmona, 1977 Representation Theory and Automorphic Forms Toshiyuki Kobayashi, Wilfried Schmid, Jae-Hyun Yang, 2007-10-10 This volume uses a unified approach to representation theory and automorphic forms It collects papers written by leading mathematicians that track recent progress in the expanding fields of representation theory and automorphic forms and their association with number theory and differential geometry Topics include Automorphic forms and distributions modular forms visible actions Dirac cohomology holomorphic forms harmonic analysis self dual representations and Langlands Functoriality Conjecture Both graduate students and researchers will find inspiration in this volume

D-Modules, Perverse Sheaves, and Representation Theory Ryoshi Hotta, Toshiyuki Tanisaki, 2007-11-07 D modules continues to be an active area of stimulating research in such mathematical areas as algebraic analysis differential equations and representation theory Key to D modules Perverse Sheaves and Representation Theory is the authors essential algebraic analytic approach to the theory which connects D modules to representation theory and other areas of mathematics To further aid the reader and to make the work as self contained as possible appendices are provided as background for the theory of derived categories and algebraic varieties The book is intended to serve graduate students in a classroom setting and as self study for researchers in algebraic geometry representation theory

Isomorphisms Between H^1 Spaces Paul F.X. Müller, 2005-04-20 This book gives a thorough and self contained presentation of H^1 its known isomorphic invariants and a complete classification of H^1 on spaces of homogeneous type The necessary background is developed from scratch This includes a detailed discussion of the Haar system together with the operators that can be built from it Complete proofs are given for the classical martingale inequalities and for large deviation inequalities Complex interpolation is treated Throughout special attention is given to the combinatorial methods developed in the field An entire chapter is devoted to study the combinatorics of coloured dyadic Intervals

Singular Sets of Minimizers for the Mumford-Shah Functional Guy David, 2005-03-22 The Mumford Shah functional was introduced in the 1980s as a tool for automatic image segmentation but its study gave rise to many interesting questions of analysis and geometric measure theory The main object under scrutiny is a free boundary K where the minimizer may have jumps The book presents an extensive description of the known regularity properties of the singular sets K and the techniques to get them It is largely self contained and should be accessible to graduate students in analysis The core of the book is composed of regularity results that were proved in the last ten years and which are presented in a more detailed and unified way

Collected Papers Bertram Kostant, 2009-08-15 For more than five decades Bertram Kostant has been one of the major architects of modern Lie theory Virtually all his papers are pioneering with deep consequences many giving rise to whole new fields of activities His interests span a tremendous range of Lie theory from differential geometry to representation theory abstract algebra and mathematical physics Some specific topics cover algebraic groups and invariant theory the geometry of homogeneous spaces representation theory geometric quantization and symplectic geometry Lie algebra cohomology Hamiltonian mechanics modular forms Whittaker theory Toda lattice and much more It is striking to note that Lie theory and symmetry in general now occupies an ever increasing larger role in mathematics than it did in the fifties This is the first volume 1955-1966 of a five volume set of Bertram Kostant's collected papers A distinguished feature of this first volume is Kostant's commentaries and summaries of his papers in his own words **Complex Convexity and Analytic Functionals** Mats Andersson, Mikael Passare, Ragnar Sigurdsson, 2012-12-06 A set in complex Euclidean space is called \mathbb{C} convex if all its intersections with complex lines are contractible and it is said to be linearly convex if its complement is a union of complex hyperplanes These notions are intermediates between ordinary geometric convexity and pseudoconvexity Their importance was first manifested in the pioneering work of Andr Martineau from about forty years ago Since then a large number of new related results have been obtained by many different mathematicians The present book puts the modern theory of complex linear convexity on a solid footing and gives a thorough and up to date survey of its current status Applications include the Fantappi transformation of analytic functionals integral representation formulas polynomial interpolation and solutions to linear partial differential equations **Torus Actions On Symplectic Manifolds** Michèle Audin, 2004-09-27 The material and references in this extended second edition of *The Topology of Torus Actions on Symplectic Manifolds* published as Volume 93 in this series in 1991 have been updated Symplectic manifolds and torus actions are investigated with numerous examples of torus actions for instance on some moduli spaces Although the book is still centered on convexity results it contains much more material in particular lots of new examples and exercises **The Coxeter Legacy** Harold Scott Macdonald Coxeter, Chandler Davis, Erich W. Ellers, This collection of essays on the legacy of mathematician Donald Coxeter is a mixture of surveys updates history storytelling and personal memories covering both applied and abstract maths Subjects include polytopes Coxeter groups equivelar polyhedra Ceva's theorem and Coxeter and the artists *Infinite Groups: Geometric, Combinatorial and Dynamical Aspects* Laurent Bartholdi, Tullio Ceccherini-Silberstein, Tatiana Smirnova-Nagnibeda, Andrzej Zuk, 2005-12-09 This book offers a panorama of recent advances in the theory of infinite groups It contains survey papers contributed by leading specialists in group theory and other areas of mathematics Topics include amenable groups Kaehler groups automorphism groups of rooted trees rigidity \mathbb{C} algebras random walks on groups pro p groups Burnside groups parafree groups and Fuchsian groups The accent is put on strong connections between group theory and other areas of mathematics *Parabolic Quasilinear Equations Minimizing Linear*

Growth Functionals Fuensanta Andreu-Vaillo, Vicent Caselles, José M. Mazón, 2012-12-06 Award winning monograph of the Ferran Sunyer i Balaguer Prize 2003 This book contains a detailed mathematical analysis of the variational approach to image restoration based on the minimization of the total variation submitted to the constraints given by the image acquisition model This model initially introduced by Rudin Osher and Fatemi had a strong influence in the development of variational methods for image denoising and restoration and pioneered the use of the BV model in image processing After a full analysis of the model the minimizing total variation flow is studied under different boundary conditions and its main qualitative properties are exhibited In particular several explicit solutions of the denoising problem are computed
