Acoustics of Wood Voichita Bucur, 2006-03-09 Considerable activity in the acoustics of wood has occurred since the first edition of this book in 1995 An informal survey of a number of the published articles and papers presented at international conferences revealed that the interest of the wood science community is continually increasing In this context I felt compelled to revise the text in accordance with newer findings and this prompted the addition in the present book of 159 new references added to the existing 850 in the first edition As a result of the favorable comments upon the first edition from students and colleagues I have included a

part on mathematical theory related to wave propagation in orthotropic solids in the general text in order to enable the interested reader to follow the essentially physical aspects of the subject A new chapter related to acousto ultrasonics is introduced Chapters 4 5 6 8 9 10 11 and 12 have been considerably expanded and a significant redistribution of the subject matter from the earlier edition has been made

Delamination in Wood, Wood Products and Wood-Based Composites

Voichita Bucur, 2010-11-02 In the last quarter century delamination has come to mean more than just a failure in adhesion between layers of bonded composite plies that might affect their load bearing capacity Ever increasing computer power has meant that we can now detect and analyze delamination between for example cell walls in solid wood This fast moving and critically important field of study is covered in a book that provides everyone from manufacturers to research scientists the state of the art in wood delamination studies Divided into three sections the book first details the general aspects of the subject from basic information including terminology to the theoretical basis for the evaluation of delamination A settled terminology in this subject area is a first key goal of the book as the terms which describe delamination in wood and wood based composites are numerous and often confusing The second section examines different and highly specialized methods for delamination detection such as confocal laser scanning microscopy light microscopy scanning electron microscopy and ultrasonics Ways in which NDE non destructive evaluation can be employed to detect and locate defects are also covered The book's final section focuses on the practical aspects of this defect in a wide range of wood products covering the spectrum from trees logs laminated panels and glued laminated timbers to parquet floors Intended as a primary reference this book covers everything from the microscopic anatomical level of delamination within solid wood sections to an examination of the interface of wood and its surface coatings It provides readers with the perspective of industry as well as laboratory and is thus a highly practical sourcebook for wood engineers working in manufacturing as well as a comprehensively referenced text for materials scientists wrestling with the theory underlying the subject

Nondestructive Evaluation of Wood Forest Service (U S), Forest Products Laboratory (U S), Robert J. Ross, 2015 Nature's engineering of wood through genetics wind and weather creates a wide variability in wood as a material Consequently manufacture and users of wood products are frequently frustrated in dealing with the forest resource Manufacturers sometimes argue that wood is difficult to consistently process into quality products because of the wide range of properties that exist in this raw material Users of wood products can be equally frustrated with the performance variability found in finished products Nondestructive evaluation NDE technologies have contributed significantly toward eliminating the cause of these frustrations NDE technologies have been developed and are currently used in lumber and veneer grading programs that result in engineered materials that have consistent well defined performance characteristics This brief volume explores some of the processes that are used to manufacture wood including green wood technology and provides a bit of history to wood production and its uses too Other products that may interest you from the US Forest Service can be found at this link <https://bookstore.gpo.gov/agency/819>

discussed are traditional most of them depend upon new scientific approaches to the study of the structure of materials such as for example wood cell structure which is visible only using modern high resolution microscopic techniques Many examples of modern and classical instruments are examined together with the relevance of classical techniques for the treatment of wood Composite materials especially designed for soundboards could be a good substitute for some traditional wood species The body and soundboard of the instrument are of major importance for their acoustical properties but the study also examines traditional and new wood species used for items such as bows the instrument neck string pegs etc Wood species properties for musical instruments and growth origins of woods used by great makers such as Antonio Stradivari are examined and compared with more recently grown woods available to current makers The role of varnish in the appearance and acoustics of the final instrument is also discussed since it has often been proposed as a secret ingredient used by great makers Aspects related to strings are commented As well as discussing these subjects with many illustrations from classical and contemporary instruments the book gives attention to conservation and restoration of old instruments and the physical results of these techniques There is also discussion of the current value of old instruments both for modern performances and as works of art having great monetary value The book will be of interest and value to researchers advanced students music historians and contemporary string instrument makers Musicians in general particularly those playing string instruments will also find its revelations fascinating It will also attract the attention of those using wood for a variety of other purposes for its use in musical instruments uncovers many of its fundamental features Professor Neville H Fletcher Australian National University Canberra
