The law of conscience. Simone Caramel, 2025-01-22 According to the saint John Henry Newman conscience is a law of the spirit the echo of the voice of God written in the heart of man and every creature which guides us Looking at consciousness as a dynamic law we can understand its multifaceted characteristics it is a process an interface an order an echo Among the recent scientific discoveries two in particular question and stimulate us in a particular way deterministic chaos and quantum entanglement These phenomena have been detected both in particle physics and in the classical world such as in biological systems Both however are emergencies that recall a higher order a non local reality beyond the local space time one and even before that a law that generates and guides The scientific contribution of David Bohm who explains the secret of entanglement to us in light of his causal interpretation of quantum mechanics and introduces us to its understanding through new concepts such as quantum potential implied and explicated order holomovement similarly recalls first principles to hidden variables to an ordering and regulating law The harmony of thought between Newman and Bohm helps us to understand the profound meaning of the law of consciousness and its manifestations seen as an interface between the Creator and his creatures between implied and explicated order as a real presence which we can touch with our hands when the complex and chaotic order and its connections entanglement are permanently imprinted in filigree on our heart On this basis it will be easier for us to understand the meaning of deterministic chaos and entanglement also in the dynamics of biological systems

La legge della coscienza
Simone Caramel, 2025-02-09

Secondo il santo John Henry Newman la coscienza una legge dello spirito l'eco della voce di Dio scritta nel cuore dell'uomo e di ogni creatura che ci guida Guardando alla coscienza come legge dinamica possiamo comprenderne le sue multiformi caratteristiche essa un processo un interfaccia un ordine un'eco Tra le recenti scoperte scientifiche due in particolare ci interrogano e stimolano in modo particolare il caos deterministico e l'entanglement

quantistico Questi fenomeni sono stati rilevati sia nella fisica delle particelle che nel mondo classico come ad esempio nei sistemi biologici Entrambi per sono emergenze che richiamano ad un ordine superiore ad una realtà non locale al di là di quella locale spazio temporale e prima ancora ad una legge che genera e guida Il contributo scientifico di David Bohm che ci spiega il segreto dell'entanglement alla luce della sua interpretazione causale della meccanica quantistica e ci introduce alla sua comprensione attraverso concetti nuovi come potenziale quantico ordine implicato ed esplicito olomovimento richiama analogamente a principi primi a variabili nascoste a una legge ordinatrice e regolatrice La sintonia di pensiero tra Newman e Bohm ci aiuta a comprendere il significato profondo della legge della coscienza e delle sue manifestazioni vista come interfaccia tra Creatore e sue creature tra ordine implicato ed esplicito come presenza reale che possiamo toccare con mano quando l'ordine complesso e caotico e le sue connessioni entanglement si imprime stabilmente in filigrana sul nostro cuore Su queste basi ci sarà più facile comprendere il significato di caos deterministico ed entanglement anche nelle dinamiche dei sistemi biologici
