### **Introduction**

➤ The offshore structures is very important structures as install in the sea for many purpose:

- ❖ Exploration and production of oil and gas,
- ❖ Harnessing power from sea,
- ❖ Navigational lighting,
- ❖ Radar surveillance,
- ❖ Space operations,
- ❖ Oceanographic research.

➤ In this study We focus on the structures used for the exploration and production of oil and gas industry.

➤ There are about more than 9000 fixed offshore platforms around the world related to hydrocarbon/oil production.

➤ In Egypt there are platforms in Gulf of Suez and Mediterranean Sea.

## **Nonlinear Analysis Of Offshore Structures:**

**Nonlinear Analysis of Offshore Structures** Bjørn Skallerud, Jørgen Amdahl, 2002 The importance of accounting for nonlinear effects in offshore structures has increased due to their higher utilization and extended service lives This text addresses new methods for advanced analysis of offshore structures developed during the 1990s *Nonlinear Analysis of Structures (1997)* Muthukrishnan Sathyamoorthy, 2017-11-22 Nonlinear Analysis of Structures presents a complete evaluation of the nonlinear static and dynamic behavior of beams rods plates trusses frames mechanisms stiffened structures sandwich plates and shells These elements are important components in a wide variety of structures and vehicles such as spacecraft and missiles underwater vessels and structures and modern housing Today s engineers and designers must understand these elements and their behavior when they are subjected to various types of loads Coverage includes the various types of nonlinearities stress strain relations and the development of nonlinear governing equations derived from nonlinear elastic theory This complete guide includes both mathematical treatment and real world applications with a wealth of problems and examples to support the text Special topics include a useful and informative chapter on nonlinear analysis of composite structures and another on recent developments in symbolic computation Designed for both self study and classroom instruction Nonlinear Analysis of Structures is also an authoritative reference for practicing engineers and scientists One of the world s leaders in the study of nonlinear structural analysis Professor Sathyamoorthy has made significant research contributions to the field of nonlinear mechanics for twenty seven years His foremost contribution to date has been the development of a unique transverse shear deformation theory for plates undergoing large amplitude vibrations and the examination of multiple mode solutions for plates In addition to his notable research Professor Sathyamoorthy has also developed and taught courses in the field at universities in India Canada and the United States

**Tubular Structures IX** Puthli, 2001-01-01 A reference for architects and engineers this work covers themes on architecture case studies and the application and strengths of tubular beams **Strategies for Nonlinear Analysis of Marine Structures** , 1988 This report extensively reviews the state of the art of available and emerging techniques for determining extreme responses of nonlinear marine structures and systems The contents may be categorized into two parts The first presents the nonlinear characteristics of wave induced forces and corresponding structural responses The other discusses the extreme value analysis of nonlinear systems relevant to offshore and marine structural design Generic procedures for the nonlinear analysis of marine structures were reviewed Discussions of non Gaussian random processes and the use of extreme value statistics are included Methods that may be applied to the probability analysis of extreme events were investigated Different types of nonlinear behavior of interest for various classes of offshore structures were studied Various statistical analysis methods are summarized and their applicability assumptions and limitations are discussed
