the Program Committee the speakers and authors and everyone who attended the conference Approximately 120 researchers and students from all over the world visited Genoa for the meeting representing a wide spectrum of areas in pure and applied control and systems theory The success of the conference depended on their high level of scientific and engineering expertise not to mention their enthusiasm The Conference on New Trends in Systems Theory would not have been possible without the help of a great many institutions and people We would like to thank the University of Genoa particularly Professor Enrico Beltrametti and the Ohio State University s Columbian Quincentenary Committee led by Professor Christian Zacher for encouragement and financial assistance The University of Genoa Mathematics Department and Communication Computer and System Sciences Department supplied assistance and technical help The staff of the Consorzio Genova Ricerche particularly Ms Piera Ponta and Ms Camilla Marconi worked diligently over many months and especially during the conference itself to insure a smooth and enjoyable meeting

Foundations of System Theory: Finitary and Infinitary Conditions Brian D.O. Anderson, Michael A. Arbib, E. G. Manes, 2012-12-06 This paper is one of a series in which the ideas of category theory are applied to problems of system theory As with the three principal earlier papers 1 3 the emphasis is on study of the realization problem or the problem of associating with an input output description of a system an internal description with something analogous to a state space In this paper several sorts of machines will be discussed which arrange themselves in the following hierarchy Input process Machine Output process Tree automaton Machine State behavior Machine I Adjoint Machine Sequential Machine I Decomposable Machine Linear System Group Machine Each member of the hierarchy includes members below it examples are included in parentheses and each example is at its lowest possible point in the hierarchy There are contrived examples of output process machines and IV state behavior machines which are not adjoint machines 3 but as yet no examples with the accepted stature of linear systems 4 group machines 5 6 sequential machines 7 Ch 2 and tree automata 7 Ch 4
