Nonlinear Editing Basics A Primer On Electronic Film And Video Editing:

Nonlinear Editing Basics Steven E. Browne, 1998 *Nonlinear Editing Basics* is an essential guide for the student or professional to understanding nonlinear editing. Not a technical manual, this easy to understand guide to film and video post production incorporates the basics of nonlinear editing along with the telecine, bay three, two pulldown and simple operation of five important and powerful editing systems. The author incorporates his experience with the Editbox, Media 100, Avid, Lightworks and DVision to bring not only an overview of the nonlinear process but to describe the basic operation of each of these powerful editors. Regardless of whether one is looking for film or video information, this text explains the basics of both as well as how they are interrelated. If there is a film project to be finished on video or a video project to finish in the nonlinear editor, the answer to how it is done can be found in this book. Starting with film and video basics, this book explains the integration of the nonlinear editor as well as why some projects continue to cut workprint alongside the nonlinear editor. It addresses the use of the electronic editors to complete feature films in record time in addition to the dangers of cutting on these quick and sometimes too powerful systems. The nonlinear editor can be mastered quickly and efficiently if the overall concept is understood. This text not only offers a clear, concise conceptual understanding but also gives practical operation techniques using specific machines. Steven E. Browne is a Senior Editor in the Finishing Department of New Wave Entertainment in California. He is the author of two other Focal Press titles: *Video Editing*, now in its third edition, and *Film Video Terms and Concepts*.

Armed with some basic technical background information, you'll be more effective at figuring out new applications and at problem solving. The fourth edition of *Basic TV Technology* has been updated to reflect the industry shift to digital video and includes new information on compression, television standards, LCD displays, HD, and equipment. This book features the accessible Media Manual format in which every topic is covered in two pages: one of explanatory text and one of figures. A more conceptual framework leads the student from the idea, what to create, to the image, how to create on video.
