Nonlinear Elliptic And Parabolic Equations Of The Second Order:

Sobolev and Viscosity Solutions for Fully Nonlinear Elliptic and Parabolic Equations N. V. Krylov, 2018-09-07 This book concentrates on first boundary value problems for fully nonlinear second order uniformly elliptic and parabolic equations with discontinuous coefficients We look for solutions in Sobolev classes local or global or for viscosity solutions Most of the auxiliary results such as Aleksandrov's elliptic and parabolic estimates the Krylov Safonov and the Evans Krylov theorems are taken from old sources and the main results were obtained in the last few years Presentation of these results is based on a generalization of the Fefferman Stein theorem on Fang Hua Lin's like estimates and on the so called ersatz existence theorems saying that one can slightly modify any equation and get a cut off equation that has solutions with bounded derivatives These theorems allow us to prove the solvability in Sobolev classes for equations that are quite far from the ones which are convex or concave with respect to the Hessians of the unknown functions In studying viscosity solutions these theorems also allow us to deal with classical approximating solutions thus avoiding sometimes heavy constructions from the usual theory of viscosity solutions **Fully Nonlinear Elliptic Equations** Luis A. Caffarelli, Xavier Cabré, 1995 The goal of the book is to extend classical regularity theorems for solutions of linear elliptic partial differential equations to the context of fully nonlinear elliptic equations This class of equations often arises in control theory optimization and other applications

The authors give a detailed presentation of all the necessary techniques. Instead of treating these techniques in their greatest generality they outline the key ideas and prove the results needed for developing the subsequent theory. Topics discussed in the book include the theory of viscosity solutions for nonlinear equations, the Alexandroff estimate and Krylov-Safonov-Harnack type inequality for viscosity solutions, uniqueness theory for viscosity solutions, Evans and Krylov regularity theory for convex fully nonlinear equations, and regularity theory for fully nonlinear equations with variable coefficients.

Nonlinear Elliptic Equations and Nonassociative Algebras Nikolai Nadirashvili, Vladimir Tkachev, Serge Vlăduț, 2014-12-03. This book presents applications of noncommutative and nonassociative algebras to constructing unusual nonclassical and singular solutions to fully nonlinear elliptic partial differential equations of second order. The methods described in the book are used to solve a longstanding problem of the existence of truly weak nonsmooth viscosity solutions. Moreover, the authors provide an almost complete description of homogeneous solutions to fully nonlinear elliptic equations. It is shown that even in the very restricted setting of Hessian equations depending only on the eigenvalues of the Hessian, these equations admit homogeneous solutions of all orders compatible with known regularity for viscosity solutions provided the space dimension is five or larger. To the contrary, in dimension four or less, the situation is completely different, and our results suggest strongly that there are no nonclassical homogeneous solutions at all in dimensions three and four. Thus, this book gives a complete list of dimensions where nonclassical homogeneous solutions to fully nonlinear uniformly elliptic equations do exist; this should be compared with the situation of say ten years ago when the very existence of nonclassical viscosity solutions was not known.

The Mathematical Heritage of Hermann Weyl Raymond O'Neil Wells, 1988. Hermann Weyl was one of the most influential mathematicians of the twentieth century. Viewing mathematics as an organic whole rather than a collection of separate subjects, Weyl made profound contributions to a wide range of areas including analysis, geometry, number theory, Lie groups, and mathematical physics, as well as the philosophy of science and of mathematics. The topics he chose to study, the lines of thought he initiated, and his general perspective on mathematics have proved remarkably fruitful and have formed the basis for some of the best of modern mathematical research. This volume contains the proceedings of the AMS Symposium on the Mathematical Heritage of Hermann Weyl, held in May 1987 at Duke University. In addition to honoring Weyl's great accomplishments in mathematics, the symposium also sought to stimulate the younger generation of mathematicians by highlighting the cohesive nature of modern mathematics as seen from Weyl's ideas. The symposium assembled a brilliant array of speakers and covered a wide range of topics. All of the papers are expository and will appeal to a broad audience of mathematicians, theoretical physicists, and other scientists.

On Neumann Problems for Fully Nonlinear Elliptic and Parabolic Equations on Manifolds Sheng Guo, 2019 In this thesis we study second order fully nonlinear elliptic and parabolic equations with Neumann boundary conditions on compact Riemannian manifolds with smooth boundary We mainly focus on the elliptic equations with Neumann boundary condition We derive oscillation bounds for solutions under the assumption of existence of certain C subsolutions We use a parabolic approach to derive the solutions of above elliptic equations We obtain a priori C^2 estimates for parabolic equations with Neumann boundary conditions We require some geometric assumptions of background manifolds to derive the second order estimates for non uniformly elliptic equations We obtain long time existence and uniform convergence results through which we derive the solutions of above elliptic equations In the appendix we derive a parabolic Harnack inequality for linear uniformly parabolic operators with vanishing Neumann boundary condition it does not require any curvatures assumption which is essential for the uniform convergence results In application we apply the Neumann problem for the elliptic equations above to study the Calabi Yau type problem for compact
