Nonlinear Potential Theory And Weighted Sobolev Spaces:

Nonlinear Potential Theory and Weighted Sobolev Spaces Bengt O. Turesson,2007-05-06 The book systematically develops the nonlinear potential theory connected with the weighted Sobolev spaces where the weight usually belongs to Muckenhoupt's class of Ap weights These spaces occur as solutions spaces for degenerate elliptic partial differential equations The Sobolev space theory covers results concerning approximation extension and interpolation Sobolev and Poincaré inequalities Maz'ya type embedding theorems and isoperimetric inequalities In the chapter devoted to potential theory several weighted capacities are investigated Moreover Kellogg lemmas are established for various concepts of thinness Applications of potential theory to weighted Sobolev spaces include quasi continuity of Sobolev functions Poincaré inequalities and spectral synthesis theorems *Nonlinear Potential Theory and Weighted Sobolev Spaces* Bengt Ove Turesson,1995 *Nonlinear Potential Theory of Degenerate Elliptic Equations* Juha Heinonen,Tero Kipelainen,Olli Martio,2018-05-16 A self contained treatment appropriate for advanced undergraduates and graduate students this text offers a detailed development of the necessary background for its survey of the nonlinear potential theory of superharmonic functions 1993 edition *Sobolev Spaces in Mathematics I* Vladimir Maz'ya,2008-12-02 This volume marks the centenary of the birth of the outstanding mathematician of the 20th century Sergey Sobolev It includes new results on the latest topics of the theory of Sobolev spaces partial differential equations analysis and mathematical physics *Potentials and Partial Differential Equations* Suzanne Lenhart,Jie Xiao,2023-05-22 This volume is dedicated to the legacy of David R Adams 1941 2021 and discusses calculus of variations functional harmonic potential analysis partial differential equations and their applications in modeling mathematical physics and differential integral geometry **Introduction to Potential Theory** Hitoshi Tanaka,Hiroki Saito,2024-12-30 This monograph is devoted to harmonic analysis and potential theory The authors study these essentials carefully and present recent researches based on the papers including by authors in an accessible manner for graduate students and researchers in pure and applied analysis **Punctured Torus Groups and 2-Bridge Knot Groups (I)** Hirotaka Akiyoshi,Makoto Sakuma,Masaaki Wada,Yasushi Yamashita,2007-05-26 Here is the first part of a work that provides a full account of Jørgensen's theory of punctured torus Kleinian groups and its generalization It offers an elementary and self contained description of Jørgensen's theory with a complete proof Through various informative illustrations readers are naturally led to an intuitive synthetic grasp of the theory which clarifies how a very simple fuchsian group evolves into complicated Kleinian groups *Geometric Aspects of Functional Analysis* Vitali D. Milman,Gideon Schechtman,2007-04-27 This collection of original papers related to the Israeli GAFA seminar on Geometric Aspects of Functional Analysis during the years 2004–2005 reflects the general trends of the theory and are a source of inspiration for research Most of the papers deal with different aspects of the Asymptotic Geometric Analysis ranging from classical topics in the geometry of convex bodies to the study of sections or projections of convex bodies Attractivity and Bifurcation for

Nonautonomous Dynamical Systems Martin Rasmussen,2007-05-26 Although bifurcation theory of equations with autonomous and periodic time dependence is a major object of research in the study of dynamical systems since decades the notion of a nonautonomous bifurcation is not yet established In this book two different approaches are developed which are based on special definitions of local attractivity and repulsivity It is shown that these notions lead to nonautonomous Morse decompositions

Function Spaces and Potential Theory David R. Adams,Lars I. Hedberg,2012-12-06 Function spaces especially those spaces that have become known as Sobolev spaces and their natural extensions are now a central concept in analysis In particular they play a decisive role in the modern theory of partial differential equations PDE Potential theory which grew out of the theory of the electrostatic or gravitational potential the Laplace equation the Dirichlet problem etc had a fundamental role in the development of functional analysis and the theory of Hilbert space Later potential theory was strongly influenced by functional analysis More recently ideas from potential theory have enriched the theory of those more general function spaces that appear naturally in the study of nonlinear partial differential equations This book is motivated by the latter development The connection between potential theory and the theory of Hilbert spaces can be traced back to C F Gauss 181 who proved with modern rigor supplied almost a century later by O Frostman 158 the existence of equilibrium potentials by minimizing a quadratic integral the energy This theme is pervasive in the work of such mathematicians as D Hilbert Ch J de La Vallee Poussin M Riesz O Frostman A Beurling and the connection was made particularly clear in the work of H Cartan 97 in the 1940 s In the thesis of J Deny 119 and in the subsequent work of J Deny and J L

Recent Advances in Fuzzy Sets Theory, Fractional Calculus, Dynamic Systems and Optimization Said Melliani,Oscar Castillo,2022-08-10 We describe in this book recent advances in fuzzy sets theory fractional calculus dynamic systems and optimization The book provides a setting for the discussion of recent developments in a wide variety of topics including partial differential equations dynamic systems optimization numerical analysis fuzzy sets theory fractional calculus and its applications The book is aimed at bringing together contributions from leading academic scientists researchers and research scholars to exchange and share their experiences and research results on all aspects of applied mathematics modeling algebra economics finance and applications It also provides an interdisciplinary platform for researchers practitioners and educators to present the most recent innovations trends and concerns as well as practical challenges encountered and solutions adopted in the fields of applied mathematics The published chapters address various aspects of academic scientists researchers and research scholars in many variety mathematical topics

Topology of Singular Fibers of Differentiable Maps Osamu Saeki,2004-08-30 The volume develops a thorough theory of singular fibers of generic differentiable maps This is the first work that establishes the foundational framework of the global study of singular differentiable maps of negative codimension from the viewpoint of differential topology The book contains not only a general theory but also some explicit examples together with a number of very concrete applications This is a very interesting subject in differential topology since it shows

a beautiful interplay between the usual theory of singularities of differentiable maps and the geometric topology of manifolds

The Valuative Tree Charles Favre,Mattias Jonsson,2004-08-30 This volume is devoted to a beautiful object called the valuative tree and designed as a powerful tool for the study of singularities in two complex dimensions Its intricate yet manageable structure can be analyzed by both algebraic and geometric means Many types of singularities including those of curves ideals and plurisubharmonic functions can be encoded in terms of positive measures on the valuative tree The construction of these measures uses a natural tree Laplace operator of independent interest

Differential Equations

Driven by Rough Paths Terry J. Lyons,Michael J. Caruana,Thierry Lévy,2007-04-25 Each year young mathematicians congregate in Saint Flour France and listen to extended lecture courses on new topics in Probability Theory The goal of these notes representing a course given by Terry Lyons in 2004 is to provide a straightforward and self supporting but minimalist account of the key results forming the foundation of the theory of rough paths

Construction of Global Lyapunov

Functions Using Radial Basis Functions Peter Giesl,2007-04-11 The basin of attraction of an equilibrium of an ordinary differential equation can be determined using a Lyapunov function A new method to construct such a Lyapunov function using radial basis functions is presented in this volume intended for researchers and advanced students from both dynamical systems and radial basis functions Besides an introduction to both areas and a detailed description of the method it contains error estimates and many examples

Lectures on the Automorphism Groups of Kobayashi-Hyperbolic Manifolds Alexander Isaev,2007-03-11 In this monograph the author presents a coherent exposition of recent results on complete characterization of Kobayashi hyperbolic manifolds with high dimensional groups of holomorphic automorphisms These classification results

can be viewed as complex geometric analogues of those known for Riemannian manifolds with high dimensional isotropy groups that were extensively studied in the 1950s 70s

Value-Distribution of L-Functions Jörn Steuding,2007-05-26 These notes present recent results in the value distribution theory of L functions with emphasis on the phenomenon of universality

Universality has a strong impact on the zero distribution Riemann s hypothesis is true only if the Riemann zeta function can approximate itself uniformly The text proves universality for polynomial Euler products The authors approach follows mainly Bagchi s probabilistic method Discussion touches on related topics almost periodicity density estimates Nevanlinna theory and functional independence

Forward-Backward Stochastic Differential Equations and their Applications

Jin Ma,Jiongmin Yong,2007-04-24 This volume is a survey monograph on the recently developed theory of forward backward stochastic differential equations FBSDEs Basic techniques such as the method of optimal control the Four Step Scheme and the method of continuation are presented in full Related topics such as backward stochastic PDEs and many applications of FBSDEs are also discussed in detail The volume is suitable for readers with basic knowledge of stochastic differential equations and some exposure to the stochastic control theory and PDEs It can be used for researchers and or senior graduate students in the areas of probability control theory mathematical finance and other related fields

Concentration

Inequalities and Model Selection Pascal Massart, 2007-04-26 Concentration inequalities have been recognized as fundamental tools in several domains such as geometry of Banach spaces or random combinatorics They also turn to be essential tools to develop a non asymptotic theory in statistics This volume provides an overview of a non asymptotic theory for model selection It also discusses some selected applications to variable selection change points detection and statistical learning

Interpolation Theory and Applications Michael Cwikel, Laura De Carli, Mario Milman, 2007 This volume contains the Proceedings of the Conference on Interpolation Theory and Applications in honor of Professor Michael Cwikel Miami FL 2006 The central topic of this book is interpolation theory in its broadest sense with special attention to its applications to analysis The articles include applications to classical analysis harmonic analysis partial differential equations function spaces image processing geometry of Banach spaces and more This volume emphasizes remarkable connections between several branches of pure and applied analysis Graduate students and researchers in analysis will find it very useful
