

How can a nonneutral plasma have anything to do with nuclear reaction rates??

Nonneutral plasma:
collection of charges of like sign :
eg. pure ion plasma (Be^+)

pure ion plasmas can be confined for *days* in the static electric and magnetic fields of a Penning trap

$B \sim 4$ Tesla
 $E \sim 10$ Volt/cm
 $\omega \sim 30$ kHz
 $n \sim 10^8$ cm $^{-3}$
 $T \sim 0.001$ K - 10^4 K

Nuclear reactions are NOT happening.

But something analogous to nuclear reactions IS happening!

Davidson, 1991-12-16 A nonneutral plasma is a many body collection of charged particles in which there is not overall charge neutrality Such systems are characterized by intense self electric fields and in high current configurations by intense self magnetic fields Nonneutral plasmas like electrically neutral plasmas exhibit a broad range of collective properties such as plasma waves instabilities and Debye shielding Moreover the intense self fields in a nonneutral plasma can have a large influence on detailed plasma behavior and stability properties Since the early 1970s this important area of physics has developed into a diverse and sophisticated subfield of pure and applied plasma physics Physics of Nonneutral Plasmas is a graduate level text which covers a broad range of topics related to the fundamental properties and applications of nonneutral plasmas The subject matter is treated systematically from first principles using a unified theoretical approach and the emphasis is on the development of basic concepts that illustrate the underlying physical processes The book includes 138 problems 143 figures and illustrations and the results from several classic experiments illustrating fundamental processes in nonneutral plasmas and coherent electromagnetic wave generation by relativistic electrons Its thorough treatment of the subject gives it broad and lasting appeal to graduate students and researchers in the field **Theory of Nonneutral Plasmas** Ronald C.
