Nonperturbative Quantum Chromodynamics Workshop Proceedings:

Workshop on Non-Perturbative Quantum Chromodynamics Kimball Milton, M.A. Samuel, 2012-12-06 *Non-perturbative Qcd, Proceedings Of The Sixth Workshop* Herbert Martin Fried, Yves Gabellini, Berndt Muller, 2002-04-29 This volume is devoted to different facets of QCD stressing non perturbative analytic and lattice formulations scattering solutions and approximations and the understanding of recent RHIC experiments It discusses ideas of the fifth dimension originating in brane theory as well as possible experimental tests and predictions of those ideas **Proceedings of the Eighth**

Workshop on Non-Perturbative Quantum Chromodynamics Berndt Müller, 2005 *N* Physics and Nonperturbative Quantum Chromodynamics* Silvano Simula, Bijan Saghai, Nimai C. Mukhopadhyay, Volker D. Burkert, 2012-12-06 The Workshop N Physics and non perturbative Qcd was held at the European Center for Theoretical Studies and Related Areas ECT in Trento Italy during May 18-29 1998 Previous workshops of the series on N Physics took place at the Florida State University 1994 at CEBAF 1995 at the Institute for Nuclear Theory in Seattle 1996 and at the George Washington University 1997 The Workshop was devoted to a summary of recent experimental and theoretical research on N physics and special emphasis was given to the information that photo and electro production of nucleon resonances can provide on the non perturbative regime of Quantum Chromodynamics The idea was to stimulate discussions among experimentalists and theoreticians in order to pursue the interpretation of the huge amount of forthcoming data from several laboratories in the world It was therefore decided to have both experimental and theoretical lectures on the main topics like among the others single and double pion production TJ and K meson production the GDH sum rule the spin of the proton etc Thanks to the unusual two week extension of the Workshop the allotted time for the lectures was extended up to one hour in order to allow the invited lecturers to give a detailed presentation of their topics Finally various short contributions were selected to sharpen the discussion about selected items **Proceedings of the Workshop on Quantum Chromodynamics,**

UNDER THE SPELL OF THE GAUGE PRINCIPLE by G t Hooft The University of Bologna and its Academy of Sciences in collaboration with the Italian National Institute for Nuclear Physics and the Italian Physical Society celebrated in 1998 the bicentenary of a great pioneer in the field of electric phenomena Luigi Galvani the father of macroelectricity During these two centuries the physics of electric phenomena has given rise first to the Maxwell equations then to quantum electrodynamics and finally to the synthesis of all reproducible phenomena the Standard Model A cornerstone of the Standard Model is quantum chromodynamics QCD which describes the interaction between quarks and gluons in the innermost part of the structure of matter The discovery of QCD will be recalled in the future as one of the greatest achievements of mankind Many physicists the world over have contributed to its creation on both the experimental and the theoretical front Professor Antonino Zichichi has played an important role in this scientific venture as documented by his works which are reproduced in this invaluable volume One of the founders of European physics Professor Victor F Weisskopf contributes with his memories of the time when QCD had many problems This volume owes its existence to a founding father of QCD Professor Vladimir N Gribov whose sudden demise prevented him from directly contributing to its final edition Two world leaders in subnuclear theoretical physics Professors Gerardus t Hooft and Gabriele Veneziano illustrate the significance of the contributions of Antonino Zichichi in QCD

Perturbative and Non-perturbative Approaches to String Sigma-Models in AdS/CFT Edoardo Vescovi,2017-08-17 This thesis introduces readers to the type II superstring theories in the AdS5 S5 and AdS4 CP3 backgrounds Each chapter exemplifies a different computational approach to measuring observables conformal dimensions of single trace operators and expectation values of Wilson loop operators relevant for two supersymmetric theories the N 4 super Yang Mills theory and the N 6 Chern Simons matter ABJM theory Perturbative techniques have traditionally been used to make quantitative predictions in quantum field theories but they are only reliable as long as the interaction strengths are weak The anti de Sitter conformal field theory AdS CFT correspondence realizes physicists dream of studying strongly coupled quantum field theories with enhanced symmetries using the methods provided by string theory The first part of the thesis sets up the semiclassical quantization of worldsheet sigma model actions around string solutions of least area in AdS space This machinery is used to capture quantum corrections at large coupling to next to leading and next to next to leading order by solving the determinants of partial differential operators and by computing Feynman diagrams respectively In turn the second part presents an innovative approach based on Monte Carlo simulations to finite coupling for a lattice discretized model of the AdS5 S5 superstring action The thesis focuses on fundamental aspects as well as on applications previously published by the author and offers a valuable reference work for anyone interested in the most recent developments in this field [Bibliographic Guide to Conference Publications](#) New York Public Library.
