## **Nonpharmacologic Therapy Of Hypertension:**

Nonpharmacological Approaches to the Control of High Blood Pressure Joint National Committee on Detection, Evaluation, and Treatment of High Blood Pressure. Subcommittee on Nonpharmacologic Therapy, 1986      **Therapy in Nephrology and Hypertension E-Book** Christopher S. Wilcox, 2008-08-22 Thoroughly revised the new edition of this companion to Brenner's The Kidney equips you with today's guidance to effectively manage renal and hypertension patients. International authorities emphasize the specifics of treatment while presenting field-tested advice on the best therapeutic strategies available. New chapters reflect the latest evidence impacting current clinical issues while a new design helps you reference the information more easily. Presents the most comprehensive text available on nephrology and hypertension treatment for a convenient single source that is easy to consult. Features the evidence-based guidance of leading authorities for making more informed clinical decisions. Offers in-depth discussions and referenced coverage of key trials to help you analyze the results and the evidence provided. Provides treatment algorithms and tables of commonly used drugs in each chapter for quick access. Expert advice on arriving at the best and most appropriate treatment regimen. Offers new chapters on erectile and sexual dysfunction, transplant immunology and immunosuppression, dietary salt restriction, and systematic vasculitis and pauci-immune glomerulonephritis that reflect new evidence impacting current clinical issues. Presents the contributions of newly assigned section editors, authorities in their subspecialty fields who offer you the benefit of their practice-proven expertise. Provides rationales for the therapies presented to help you choose the most effective treatment for each patient.

**Manual of Nonpharmacological Control of Hypertension** J.R. Viskoper, 2012-12-06 The prevention and correction of high blood pressure obviously is not an end in itself but a means of preventing cardiovascular complications. It is tempting to resort to antihypertensive drugs for the simple reason that current preparations are easy to dose and to take. There is a variety of reasons, however, to take advantage of the antihypertensive potential of nonpharmacological approaches. First, for one thing, the use of tablets tends to accentuate the negative effects of labelling a subject as hypertensive. The act of taking tablets per se may elicit a spectrum of subjective adverse effects as we have learned from placebo-controlled therapeutic trials. Even more importantly, the benefits of antihypertensive drug treatment are largely confined to the reduction of stroke and disease of the large vessels. With regard to incidence of cardiac events, some modest beneficial effects have been registered, such as a decrease in congestive heart failure and in the fatality rate of myocardial infarction. The effects on the incidence of coronary heart disease are only marginal at best. This disappointing finding has been ascribed to various factors: unwanted metabolic effects of anti-hypertensive drugs, inadvertent drops in diastolic pressure interfering with coronary perfusion, and last but not least, failure to eliminate risk factors other than high blood pressure, smoking, alcohol abuse, lipid and glucose disturbances, obesity, and the hemodynamic disadvantages of a sedentary life. Most of these additional noxious factors are refractory to drug treatment and call for modification of life style.
