Non-regular Differential Equations and Calculations of Electromagnetic Fields N. E. Tovmasyan, L. Z.

Gevorkyan, M. S. Ginovyan, M. N. Bobrova, 1998 This book deals with the boundary value problems for non regular partial differential equations in the half plane Efficient methods are developed for resolution of boundary value problems for improperly elliptic equations based on the theory of analytic functions and functional analysis having great theoretical and practical importance In canonical domains circle ellipse half plane etc explicit formulas for solutions to Riemann Hilbert and Dirichlet type problems for improperly elliptic equations are obtained A new approach is proposed for the investigation of the harmonic oscillations of electromagnetic fields in stratified and non homogeneous media and for the calculation of capacitors bounded by analytic surfaces The book can be used by professionals in a wide range of specialties including mathematics mechanics physics and many realms of engineering

Modern Methods in Operator Theory and Harmonic Analysis Alexey Karapetyants, Vladislav Kravchenko, Elijah Liflyand, 2019-08-28 This proceedings volume gathers selected peer reviewed papers from the Modern Methods Problems and Applications of Operator Theory and Harmonic Analysis VIII OTHA 2018 conference which was held in Rostov on Don Russia in April 2018 The book covers a diverse range of topics in advanced mathematics including harmonic analysis functional analysis operator theory function theory differential equations and fractional analysis all fields that have been intensively developed in recent decades Direct and inverse problems arising in mathematical physics are studied and new methods for solving them are presented Complex multiparameter objects that require the involvement of operators with variable parameters and functional spaces with fractional and even variable exponents make these approaches all the more relevant Given its scope the book will especially benefit researchers with an interest in new trends in harmonic analysis and operator theory though it will also appeal to graduate students seeking new and intriguing topics for further investigation

Operator Theory and Harmonic Analysis Alexey N. Karapetyants, Vladislav V. Kravchenko, Elijah Liflyand, Helmuth R. Malonek, 2021-09-27 This volume is part of the collaboration agreement between Springer and the ISAAC society This is the first in the two volume series originating from the 2020 activities within the international scientific conference Modern Methods Problems and Applications of Operator Theory and Harmonic Analysis OTHA Southern Federal University in Rostov on Don Russia This volume is focused on general harmonic analysis and its numerous applications The two volumes cover new trends and advances in several very important fields of mathematics developed intensively over the last decade The relevance of this topic is related to the study of complex multiparameter objects required when considering operators and objects with variable parameters

Analysis, PDEs, and Applications Zhirayr Avetisyan, Michael Ruzhansky, Armen Vagharshakyan, 2025-09-19 The present volume collects extended abstracts of lectures and talks presented at the Summer School and Conference Analysis PDEs and Applications held 24 June 6 July 2024 at Yerevan State University Armenia The thematic scope of contributions includes linear and non linear partial differential

equations spectral theory and microlocal analysis harmonic and functional analysis theory of functions and approximation theory and applications in mathematical physics Each talk or lecture begins with a survey of a body of mathematical work either classic or modern leading up to recent advances This is followed by an exposition of either a specific research problem or a broader area of modern mathematical research presented by an expert in the field The volume will be of interest to not only students and young researchers but also experts looking for a crash course in the main concepts and ideas in one of the many advanced mathematical topics discussed
