Non-Serial Dynamic Programming

The statement of the nonserial (NSPD) unconstrained dynamic programming problem is:

$$\min_X f(X) = \min_X \sum_{i \in T} f_i(X^i)$$

where $X = \{x_1, x_2, \ldots, x_n\}$ is a set of discrete variables, S_{x_j} being the

definition set of the v $X^i \subset X$ ($|S_{x_j}| = \sigma_{x_j}$),

$T = \{1, 2, \ldots, t\}$, and

The function f(x) is called the objective function, and the functions $f_i(X^i)$ are the components of the objective function.

Rosenman,John S. Gero,1980 Dynamic programming is an extremely powerful optimization approach used for the solution of problems which can be formulated to exhibit a serial stage state structure However many design problems are not serial but have highly connected interdependent structures Existing methods for the solution of nonserial problems require the problem to possess a certain structure or limit the size of the problem due to storage and computational time requirements The aim of this paper is to show that nonserial problems can be solved by the use of dynamic programming incorporating algorithms based on heuristics Two such algorithms are developed using artificial intelligence concepts of estimating the likelihood of future results on present decisions The algorithms are explained in detail A small problem is solved and the results of testing them on large scale problems are given The method is then used to solve a problem drawn from the literature 　　**Dynamic Programming Algorithms and Analyses for Nonserial Networks** Augustine O. Esogbue,GEORGIA INST OF TECH ATLANTA SCHOOL OF INDUSTRIAL AND SYSTEMS ENGINEERING.,1983 This report discusses the research conducted by the research team at the Georgia Institute of Technology in the area of nonserial dynamic programming networks The problems approach and major results are summarized in Chapter 1 while the rest of the chapters discuss in detail the algorithm developments experiment with sample problems and algorithmic complexities Each chapter contains detailed computer flow charts for the algorithms developed Chapter 6 employs an efficient dimensionality reduction algorithms known as the imbedded state space method in conjunction with the one developed in this study to treat an otherwise intractable problem involving feedforward loop systems These algorithms are useful inputs to the development of dynamic programming based strategies for the analysis of complex nonserial networks 　　*Analysis and Optimization of Complex Nonserial Dynamic Programming Network Systems* Chae Young Lee,1985 　　**Nonserial Dynamic Programming Formulations of Satisfiability** David Fernandez-Baca,1987 　　**Nonserial Dynamic Programming [by] Umberto Bertelè and Francesco Brioschi** Umberto Bertelè,1972 　　<u>Nonserial Dynamic Programming</u> A.
