## **Nontarget Effects Of Biological Control:**

*Nontarget Effects of Biological Control* Peter A. Follett, Jian J. Duan, 2012-12-06 *Nontarget Effects of Biological Control* is the first book of its kind The environmental safety of biological control has come under scrutiny due to several areas of concerns the irreversibility of alien introductions the prevalence of host switching to innocuous native or beneficial species dispersal of the biocontrol agent to new habitats away from croplands and the lack of research on the efficacy and impact of biocontrol attempts The debate has been strongly polarized between conservationists and biological control practitioners *Nontarget Effects of Biological Control* proposes that retrospective analyses of systems in place in which nontarget effects are now documented or suspected provide the necessary information for planning and evaluating future releases to reduce risk The book presents case histories of past biological control introductions from island and continental ecosystems

Hurley, Simon A.

Lawson, Bernard Slippers, 2025-02-24 This book includes chapters focusing on the principles of biological control and influence of policy ecology and diversity in establishing successful programs Plantation forests have a crucial role to meet the fiber demands of a growing world population especially considering the concerning decrease in the world s total forest area One of the greatest threats to the sustainability of plantation forestry is insect pests Among the approaches that can be used

to manage populations of insect pests biological control is considered one of the most feasible and effective approaches to use in plantation forests The authors review past and current major biological control programs in different plantation forest systems including pine eucalyptus and poplar and including classical conservation and augmentative approaches Other chapters examine opportunities to use new technologies and integrated approaches and identify future challenges in the use of biological control

*Biological Control* Peter G. Mason, 2021-10-01 Biological Control Global Impacts Challenges and Future Directions of Pest Management provides a historical summary of organisms and main strategies used in biological control as well as the key challenges confronting biological control in the 21st century Biological control has been implemented for millennia initially practised by growers moving beneficial species from one local area to another Today biological control has evolved into a formal science that provides ecosystem services to protect the environment and the resources used by humanity With contributions from dedicated scientists and practitioners from around the world this comprehensive book highlights important successes failures and challenges in biological control efforts It advocates that biological control must be viewed as a global endeavour and provides suggestions to move practices forward in a changing world Biological Control is an invaluable resource for conservation specialists pest management practitioners and those who research invasive species as well as students studying pest management science

Biological Control of Insect Pests Using Egg Parasitoids S. Sithanantham, Chandish R. Ballal, S.K. Jalali, N Bakthavatsalam, 2013-08-15 The theme of the book is highly relevant to the current emphasis on environment conservation with focus on native biodiversity conservation in agro ecosystems The current impetus being given to organic farming and export oriented agri horticulture in the country calls for access to relevant scientific knowledge base among the stakeholders Research on biological pest control is more than a century old in India Egg parasitoids which are mainly tiny wasps led by the family Trichogrammatidae are the most widely utilized natural enemies for biological control globally Over thirty countries are using these bioagents to protect over 10 million hectares of agricultural and forestry crops from many important insect pests The book comprises 18 chapters which are arranged in continuum commencing with basic aspects of knowledge and ending in their utilization targets The chapters cover broadly four areas bio diversity and natural occurrence of egg parasitoids behaviour and adaptation of egg parasitoids mass production and safe use of egg parasitoids and utilisation of egg parasitoids in different crop ecosystems Some of the chapters cater to the needs of discipline wise update on the current R D scenario like insect taxonomy biotechnology mass production and quality control of the target organisms egg parasitoids which are useful for laboratory scientists researchers There are also chapters devoted to knowledge status and scope for utilization of egg parasitoids in different target crops which cater to requirements of field entomologists and extensionists for use in their tasks of guiding farmers local guides The

book is different in approach method structure and content and ensures holistic coverage of the topic The chapters are written by active and experienced workers in different crops and aspects and co edited by four very experienced experts who have over three decades R D experience in the subject All the authors have uniformly focussed on comprehensive literature study and critical identification of knowledge gaps for future R D thus the book is novel in outlook up to date in content and comprehensive in coverage of themes This book will be useful for supplementary reading for MSc Agriculture and PhD Agriculture students besides MSc PhD research students in Zoology Environmental Biology who are specialising in Entomology It would also serve as a very useful reference book for researchers worldwide though focus is also there on Indian work It addresses the special information needs of students and faculty besides practitioners and extensionists in the Australasia and Africa regions and thus not limited to the R D knowledge generated in developed countries

*Environmental Impacts of Microbial Insecticides* Heikki M.T. Hokkanen, Ann Hajek, 2013-06-29 Biological pesticides are increasingly finding their place in IPM and increasing numbers of products are making their way to the marketplace Particularly in China Latin America and Australia implementation is proceeding on a large scale However in the USA and Europe registration procedures for insect pathogens to be used for insect control have been established that require low levels of risk resulting in costs of retarding the implementation of microbial agents This book provides a review of the state of the art of studies on the environmental impact of microbial insecticides It originates from a Society for Invertebrate Pathology Microbial Control Division Symposium Assessment of environmental safety of biological insecticides organised in collaboration with the EU ERBIC research project FAIR5 CT97 3489 This symposium was initiated by Heikki Hokkanen and Chris Lomer and was held at the SIP Annual Meeting in 2001 in The Netherlands The emphasis in this book is on large scale use of microbial agents for insect control demonstrating how this use has been proceeding with minimal environmental impact This book is intended to be of use to regulatory authorities in determining whether further studies in certain areas are necessary and how to conduct them if needed or whether sufficient information has been collected already to permit full registration of many of these biological control agents

**Alien Species and Insect Conservation** Tim R. New, 2016-06-09 This overview of the roles of alien species in insect conservation brings together

information evidence and examples from many parts of the world to illustrate their impacts often severe but in many cases poorly understood and unpredictable as one of the primary drivers of species declines ecological changes and biotic homogenisation Both accidental and deliberate movements of species are involved with alien invasive plants and insects the major groups of concern for their influences on native insects and their environments Risk assessments stimulated largely through fears of non target impacts of classical biological control agents introduced for pest management have provided valuable lessons for wider conservation biology They emphasise the needs for effective biosecurity risk avoidance and minimisation and evaluation and management of alien invasive species as both major components of many insect species conservation programmes and harbingers of change in invaded communities The spread of highly adaptable ecological generalist invasive species which are commonly difficult to detect or monitor can be linked to declines and losses of numerous localised ecologically specialised insects and disruptions to intricate ecological interactions and functions and create novel interactions with far reaching consequences for the receiving environments Understanding invasion processes and predicting impacts of alien species on susceptible native insects is an important theme in practical insect conservation

**Feasibility of Using Mycoherbicides for Controlling Illicit Drug Crops** National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Board on Agriculture and Natural Resources, Committee on Mycoherbicides for Eradicating Illicit Drug Crops, 2011-12-15 The control of illicit drug trafficking and drug use is a difficult and complex process that involves a variety of prevention control treatment and law enforcement strategies Eradication strategies for controlling illicit drug crops are used to target the beginning of the drug supply chain by preventing or reducing crop yields Mycoherbicides have been proposed as an eradication tool to supplement the current methods of herbicide spraying mechanical removal and manual destruction of illicit drug crops Some people regard them as preferable to chemical herbicides for controlling illicit drug crops because of their purported specificity to only one plant species or a few closely related species As living microorganisms they have the potential to provide long term control if they can persist in the environment and affect later plantings Research on mycoherbicides against illicit drug crops has focused on three pathogens *Fusarium oxysporum* f sp *cannabis* for *cannabis* *Cannabis sativa* *F. oxysporum* f sp *erythroxyli* for *coca* *Erythroxyllum coca* and *E. novogranatense* and *Crivellia papaveracea* or *Brachycladium papaveris* formerly known as *Pleospora papaveracea* and *Dendryphion penicillatum* respectively for opium poppy *Papaver somniferum* Feasibility of Using Mycoherbicides for Controlling Illicit Drug Crops addresses issues about the potential use of the proposed mycoherbicides their effectiveness in eradicating their target plants the feasibility of their large scale industrial manufacture and delivery their potential spread and persistence in the environment their pathogenicity and toxicity to nontarget organisms including other plants fungi animals and humans their potential for mutation and resulting effects on target plants and nontarget organisms and research and development needs On the basis of its review the report concludes that the available data are

insufficient to determine the effectiveness of the specific fungi proposed as mycoherbicides to combat illicit drug crops or to determine their potential effects on nontarget plants microorganisms animals humans or the environment However the committee offers an assessment of what can and cannot be determined at the present time regarding each of the issues raised in the statement of task

Ecological Impacts of Non-Native Invertebrates and Fungi on Terrestrial Ecosystems

David Langor, Jon Sweeney, 2009-01-21 Since the arrival of Europeans about 500 years ago an estimated 50 000 non native species have been introduced to North America including Hawaii Non native species figure prominently in our lives often as ornamentals sources of food or pests Although many introduced species are beneficial there is increasing awareness of the enormous economic costs associated with non native pests In contrast the ecological impacts of non native species have received much less public and scientific attention despite the fact that invasion by exotic species ranks second to habitat destruction as a cause of species loss In particular there is little information about the ecological impacts of hyper diverse groups such as terrestrial fungi and invertebrates A science symposium Ecological impacts of non native invertebrates and fungi on terrestrial ecosystems held in 2006 brought together scientists from the USA and Canada to review the state of knowledge in this field of work Additional reviews were solicited following the symposium The resulting set of review synthesis papers and case studies represents a cross section of work on ecological impacts of non native terrestrial invertebrates and fungi Although there is a strong focus on Canadian work there is also significant presentation of work in the northern USA and Europe
