It reviews commonly used evaluation methods and shows that they are not always suitable for this purpose. Using representative case studies, the book identifies good and bad practices for evaluating human robot interactions and proposes new standardized processes as well as recommendations carefully developed on the basis of intensive discussions between specialists in various HRI related disciplines e.g. psychology, ethology, ergonomics, sociology, ethnography, robotics, and computer science. The book is the result of a close long standing collaboration between the editors and the invited contributors including but not limited to their inspiring discussions at the workshop on Evaluation Methods Standardization for Human Robot Interaction (EMSHRI) which have been organized yearly since 2015. By highlighting and weighing good and bad practices in evaluation design for HRI, the book will stimulate the scientific community to search for better solutions, take advantages of interdisciplinary collaborations, and encourage the development of new standards to accommodate the growing presence of robots in the day to day and social lives of human beings.
