**Plant Respiration: Metabolic Fluxes and Carbon Balance** Guillaume Tcherkez, Jaleh Ghashghaie, 2018-02-20 There are currently intense efforts devoted to understand plant respiration from genes to ecosystems and its regulatory mechanisms this is because respiratory CO<sub>2</sub> production represents a substantial carbon loss in crops and in natural ecosystems Thus in addition to manipulating photosynthesis to increase plant biomass production minimization of respiratory loss should be considered in plant science and engineering However respiratory metabolic pathways are at the heart of energy and carbon skeleton production and therefore it is an essential component of carbon metabolism sustaining key processes such as photosynthesis The overall goal of this book is to provide an insight in such interactions as well as an up to date view on respiratory metabolism taking advantage of recent advances and concepts from fluxomics to natural isotopic signal of plant CO<sub>2</sub> efflux It is thus a nonoverlapping complement to Volume 18 in this series *Plant Respiration From Cell to Ecosystem* which mostly deals with mitochondrial electron fluxes and plant scale respiratory losses
