Huppert, Carol Brayne, Daniel W. O'Connor, 1994-06-30 Age has been identified as the strongest risk factor for Alzheimer s disease and is also strongly associated with vascular dementia With this relationship in mind this book looks upon the challenge of dementia as establishing its true relationship with normal aging The traditional disease model of dementia may have obscured important clues about many underlying causes and features of dementia In this book experts and pioneers in the fields of aging and dementia make an important contribution to the understanding of dementia by reappraising the latest research in the light of the continuum model Evidence for and against numerous models of dementia are discussed with particular relevance to the relationship between Alzheimer s and normal aging Ranging from molecular genetics and fundamental neurobiology to issues of diagnosis and the provision of services this is a challenging work in its breadth and level of argument which has far reaching implications for the study of dementia and indeed of the mind itself As a review of current thinking and research it will serve as an essential text for clinicians and scientific investigators **The Psychology**

**of Control and Aging (Psychology Revivals)** Margret M. Baltes, Paul B. Baltes, 2014-08-01 Originally published in 1986 the central topic of this book is the analysis and application of control related beliefs and behaviours for theory and practice in the psychology of aging The volume was written for two specific interrelated purposes aimed at cross fertilization between the psychology of control and the field of gerontology The first purpose was to summarise available research and theory on the psychology of control for researchers and professionals interested in gerontology at the time The second was to enrich the field of the psychology of control *The Aging Body* Susan Krauss Whitbourne, 2012-12-06 The objective of this book is to provide information that will be useful to people in a variety of disciplines who wish to learn more about normal aging

processes in the human body Although gerontologists in the biological sciences are making great strides in research on human aging and documenting this work in mono graphs texts and review chapters this information is generally not easily acces sible nor is it comprehensible to nonprofessionals in these fields This book is intended to provide a summary of this work along with its implications for psy chological functioning of the aging individual The majority of the book is devoted to describing the results of research on the physiological changes in the human body with aging and to seeking explana tions for these age effects This description has been approached in such a way as to make it readable for the nonspecialist but also to focus on research issues that will be useful reading for those who are currently working in these parti cular areas In addition throughout the book I have tried to develop some themes regarding physiological and psychological adaptation during adulthood Human Aging II United States.
