Language Development In Exceptional Circumstances

Dorothy Bishop, K. Mogford, 2013-04-15 Ever since attempts were made to describe and explain normal language development references to exceptional circumstances have been made Variations in the conditions under which language is acquired can be regarded as natural experiments which would not be feasible or ethical under normal circumstances This can throw light on such questions as What language input is necessary for the child to learn language What is the relationship between cognition and language How independent are different components of language function Are there critical periods for language development Can we specify necessary and sufficient conditions for language impairment This book covers a range of exceptional circumstances including extreme deprivation twinship visual and auditory impairments autism and focal brain damage Written in a jargon free style and including a glossary of linguistic and medical terminology the book assumes little specialist knowledge This text is suitable for both students and practitioners in the fields of psycholinguistics developmental and educational psychology speech pathology paediatrics and special education

Language Acquisition Jill G. De Villiers, Peter A.

De Villiers, 1978 The study of language acquisition has become a center of scientific inquiry into the nature of the human mind The result is a windfall of new information about language about learning and about children themselves In *Language Acquisition* Jill and Peter de Villiers provide a lively introduction to this fast growing field Their book deals centrally with the way the child acquires the sounds meanings and syntax of his language and the way he learns to use his language to communicate with others In discussing these issues the de Villiers provide a clear and insightful treatment of the classic questions about language acquisition Does the child show a genetic predisposition for speech or grammar or semantics which makes him uniquely able to learn human language What kinds of learning are involved in acquiring language and what kinds of experience with a language are necessary to support such learning Is there a critical period during the child's development which is optimal for language acquisition And what kind of psychological disabilities underlie the failure to acquire language

Impaired Language Acquisition

Silke

Lübbert, 2007-05-18 Seminar paper from the year 2006 in the subject English Language and Literature Studies Linguistics grade 1 7 University of Paderborn Anglistik course Psycholinguistics language English abstract Language is a major communicative device Human beings communicate via different language systems like for instance sign languages verbal languages and written languages This paper will deal with the acquisition of the verbal language or more accurate certain problems which can occur during the process of acquisition Almost every human being acquires one or more languages during his life The general schedule of acquisition can be considered to be the same for all languages and all human beings Learners of different languages and different age create the same errors However this process of acquisition does not always follow the same pattern there are instances in which the process is distracted due to certain problems Some children suffer from brain damages which prevent them from learning a language properly while other children have hearing problems which result as well in problems with the acquisition of a language Furthermore there exists a group of children which have no obvious physically problems like brain damages or hearing problems but they are delayed or impaired concerning the process of language acquisition This group of children is within the focus of this paper because their development as well as the treatment of their impairment is most challenging for researchers and medical doctors To show the problems that can occur in an acquisition process the first part of this paper will outline the normal process of language acquisition which almost all children pass through This serves the purpose to show the contrasts between a normal language development and an impaired development After this short outline the general concept of language impairment will be described before dealing with the concept of Specific Language Impairment SLI This concept will be described in more detail before showing the different specifications in which the SLI can occur These specifications will be illustrated through examples that show the contrasts and similarities between children with and without problems in the language acquisition The Conclusion will present a short summary of the presented issues as well as results of recent research concerning the treatment of SLI

Language Acquisition and Language Breakdown Alfonso Caramazza, Edgar B. Zurif, 1978 **Child Psychology in Action** John Harris, 2017-09-18 Originally published in 1986 there was a divorce between the immense amount of research taking place in child psychology and the real world of professional carers or teachers working with children at the time The aim of this book was therefore to examine the relationship between research and practice in order to promote links between the two The discussions are wide ranging and the book will be of interest to many groups of readers These include 1 developmental psychologists and others involved in applied research with children and their families 2 those involved in training professionals such as teachers social workers and speech therapists who will work with children 3 educational and clinical psychologists whose work involves psychological intervention with children and their caretakers and 4 students of educational or child psychology Language Development and Disorders W. Yule, M. Rutter, 1987 Communication disabilities are common although their precise nature and degree of severity vary greatly among individuals They are among

the most handicapping of disabilities because they isolate a person and in so doing restrict social educational and occupational opportunities One of the purposes of this book was to bring together theoretical practical and clinical knowledge from several disciplines that bear on language and communication into some reasonably accessible form The intent is to provide a broad and multi faceted view of language development and language disorders Thus contributions from education linguistics psychology pediatrics psychiatry neurology neuropsychology and speech therapy are included They describe our current knowledge of language development suggest classifications for language pathology outline what is known of the epidemiology of language difficulties consider assessment and therapy alternative communication systems and the impact of the new technology on communication aids The variety of perspectives that it provides will make it particularly useful to the range of specialists who are concerned with the development of communication skills and language disorders

Bilingual Competence and Bilingual Proficiency in Child Development Norbert Francis, 2011-11-18 A study of first and second language development in an indigenous community with implications for broader linguistic and cognitive issues When two or more languages are part of a child's world we are presented with a rich opportunity to learn something about language in general and about how the mind works In this book Norbert Francis examines the development of bilingual proficiency and the different kinds of competence that come together in making up its component parts In particular he explores problems of language ability when children use two languages for tasks related to schooling especially in learning how to read and write He considers both broader research issues and findings from an ongoing investigation of child bilingualism in an indigenous language speaking community in Mexico This special sociolinguistic context allows for a unique perspective on some of the central themes of bilingualism research today including the distinction between competence and proficiency modularity and the Poverty of Stimulus problem Francis proposes that competence knowledge should be considered as an integral component of proficiency ability rather than something separate and apart arguing that this approach allows for a more inclusive assessment of research findings from diverse fields of study The bilingual indigenous language project illustrates how the concepts of modularity and the competence proficiency distinction in particular might be applied to problems of language learning and literacy Few investigations of indigenous language and culture approach bilingual research problems from a cognitive science perspective By suggesting connections to broader cognitive and linguistic issues Francis points the way to further research along these lines

Kantian Conceptual Geography Nathaniel Jason Goldberg, 2015 This is a work in Kantian conceptual geography It explores issues in analytic epistemology philosophy of language and metaphysics in particular by appealing to theses drawn from Immanuel Kant's Critique of Pure Reason Those issues include the nature of the subjective objective and empirical potential scopes of the subjective what can and cannot be said about a subject independent reality analyticity syntheticity apriority and aposteriority constitutive principles acquisitive principles and empirical claims meaning indeterminacy and incommensurability logically possible versus subjectively

empirical worlds and the nature of empirical truth Part One introduces two theses drawn from the Critique The first Empirical Dualism concerns the subjective objective and empirical The second Subjective Principlism concerns principles that might bear on the empirical Part Two examines work of influential analytic philosophers to reveal how conceptually expansive the territory formed by Empirical Dualism and Subjective Principlism is Part Three defends that territory by defending Empirical Dualism and Subjective Principlism themselves Part Four discloses two new lands within the territory that have so far remained uncharted The first is a Kantian account of meaning which is shown to be superior to other accounts of meaning in the analytic literature The second are Kantian thoughts on truth which illuminate the nature of empirical truth itself Finally Part Five shows how engaging in Kantian conceptual geography enriches epistemology philosophy of language and metaphysics generally
