VLSI design in general microprocessor design in particular has been treated more like an art than a science in the past The goal of this thesis is to explain the science of VLSI design to someone who wants to build a microprocessor This can be accomplished by providing a quantitative way to evaluate and a systematic approach to design a microprocessor Resources and complexity are two separate ways a microprocessor designer can pay for performance The microprocessor designer must evaluate the performance resources and complexity tradeoffs quantitatively In this thesis the SPUR which stands for Symbolic Processing Using RISC Machines CPU micro architecture is used as example to show how performance resources and complexity tradeoffs can be evaluated quantitatively A systematic approach to microarchitectual design is then developed based on the SPUR CPU design experience The SPUR CPU is implemented in 1.6um double layer metal CMOS technology It consists of 115 000 transistors runs at 100ns and consumes 0.8W of power Important features of the SPUR CPU are internal instruction cache a four stage pipeline support for LISP a cache controller interface for multiprocessing and virtual memory support and a parallel coprocessor interface for floating point arithmetic support All these features make the SPUR CPU significantly different and more complex than previous generations of Berkeley RISC machines

Peter Oberlander,Eva M Newbrun,2011-11-01 Catherine Bauer was a leading member of a small group of idealists who called themselves housers because of their commitment to improving housing for low income families In her lifetime she changed dramatically the concept of social housing in the United States and inspired a generation of urban activists to integrate public housing into the emerging welfare state of the mid twentieth century In the first book length biography of Bauer H Peter Oberlander and Eva Newbrun trace her fascinating life and career Their account is lively spanning two continents and dotted with famous names in modern art and architecture In the late 1920s Bauer spent time in Paris where she befriended Fernan L ger Man Ray and Sylvia Beach Back in New York she fell under the spell of American urban critic Lewis Mumford who as a mentor and lover profoundly influenced her life It was at his urging that she became involved with the architects of

change in post First World War Europe among them Ernst May, André Lurid and Walter Gropius. Convinced that good social housing could produce good social architecture and moved by the visible ravages of the Depression, she became a passionate leader in the fight for housing for the poor. She co-authored the Housing Act of 1937 and advised five presidents on urban strategies. Her book *Modern Housing*, published in 1934, is still regarded as a classic. Houser is a rich contribution to the literature on modern housing, urban planning and women's studies. In the three and a half decades since her death, urbanization has radically changed landscapes the world over. Housing as a basic human right has slipped from the public agenda and the homeless have become a visible symbol of society's indifference. Catherine Bauer's visionary teachings about the symbiotic relationship between good housing and a healthy society are thus as relevant as ever.
