Numbers in Images Ilse Bing, 1976 *General Theory of Light Propagation and Imaging Through the Atmosphere* T. Stewart McKechnie, 2022-10-06 This 2nd edition lays out an updated version of the general theory of light propagation and imaging through Earth's turbulent atmosphere initially developed in the late 70s and 80s with additional applications in the areas of laser communications and high energy laser beam propagation New material includes a chapter providing a comprehensive mathematical tool set for precisely characterizing image formation with the anticipated Extremely Large Telescopes ELTS enabling a staggering range of star image shapes and sizes existing chapters rewritten or modified so as to supplement the mathematics with clearer physical insight through written and graphical means a history of the development of present day understanding of light propagation and imaging through the atmosphere as represented by the general theory described Beginning with the rudimentary geometrical optics based understanding of a century ago it describes advances made in the 1960s including the development of the Kolmogorov theory the deficiencies of which undermined its credibility but not before it had done enormous damage such as construction of a generation of underperforming light bucket telescopes The general theory requires no a priori turbulence assumptions Instead it provides means for calculating the turbulence properties directly from readily measurable properties of star images *Illumination and Color in Computer Generated Imagery* Roy Hall, 2012-12-06 In a very broad sense the historical development of computer graphics can be considered in three phases each a giant step down the road towards realistic computer generated images The first during the late 1960s and early 1970s can perhaps be characterized as the wire frame era Basically pictures were composed of lines Considerable emphasis was placed on real time interactive manipulation of the model As models became more complex and as raster technology developed eliminating the hidden lines or hidden surfaces from the image became critical for visual understanding This requirement resulted in the second phase of computer graphics the hidden surface era that developed during the 1970s and early 1980s The names associated with hidden surface algorithms read like a who's who of computer graphics The culmination of the hidden surface era and the beginning of the current and third era in computer graphics the rendering era was Turner Whitted's incorporation of a global illumination model into the ray tracing algorithm Now the goal was not just to generate an image but to generate a realistic appearing image **Subject Catalog** Library of Congress, 1976
