Numerical Methods for Bifurcation Problems T. Kupper, Hans D. Mittelman, H. Weber, 1984-07-01 **Numerical Methods for Bifurcation Problems and Large-Scale Dynamical Systems** Eusebius Doedel, Laurette S. Tuckerman, 2012-12-06 The Institute for Mathematics and its Applications IMA devoted its 1997 1998 program to Emerging Applications of Dynamical Systems Dynamical systems theory and related numerical algorithms provide powerful tools for studying the solution behavior of differential equations and mappings In the past 25 years computational methods have been developed for calculating fixed points limit cycles and bifurcation points A remaining challenge is to develop robust methods for calculating more complicated objects such as higher codimension bifurcations of fixed points periodic orbits and connecting orbits as well as the calculation of invariant manifolds Another challenge is to extend the applicability of algorithms to the very large systems that result from discretizing partial differential equations Even the calculation of steady states and their linear stability can be prohibitively expensive for large systems e g 10^3 10^6 equations if attempted by simple direct methods Several of the papers in this volume treat computational methods for low and high dimensional systems and in some cases their incorporation into software packages A few papers treat fundamental theoretical problems including smooth factorization of matrices self organized criticality and unfolding of singular heteroclinic cycles Other papers treat applications of dynamical systems computations in various scientific fields such as biology chemical engineering fluid mechanics and mechanical engineering **Continuation Techniques and Bifurcation Problems** MITTELMANN, FISCHER, 2013-11-21 The analysis of parameter dependent nonlinear has received much attention in recent years Numerical continuation techniques allow the efficient computation of solution branches in a one parameter problem In many cases continuation procedures are used as part of a more complete analysis of a nonlinear problem based on bifurcation theory and singularity theory These theories contribute to the understanding of many nonlinear phenomena in nature and they form the basis for various analytical and numerical tools which provide qualitative and quantitative results about nonlinear systems In this issue we have collected a number of papers dealing with continuation techniques and bifurcation problems Readers familiar with the notions of continuation and bifurcation will find recent research results addressing a variety of aspects in this issue Those who intend to learn about the field or a specific topic in it may find it useful to first consult earlier literature on the numerical treatment of these problems together with some theoretical background The papers in this issue fall naturally into different groups Numerical Methods for Bifurcation Problems KÜPPER, MITTELMANN, WEBER, 2013-11-27 **Continuation and Bifurcations: Numerical Techniques and Applications** Dirk Roose, Bart De Dier, Alastair Spence, 2012-12-06 Proceedings of the NATO Advanced Research Workshop Leuven Belgium September 18 22 1989 Lectures on Numerical Methods in Bifurcation Problems Herbert Bishop Keller, A.
