Nutritional And Toxicological Significance Of Enzyme Inhibitors In Foods:

Nutritional and Toxicological Significance of Enzyme Inhibitors in Foods Mendel Friedman, 2013-03-09 Soybean proteins are widely used in human foods in a variety of forms including baby formulas flour soy protein concentrates soy protein isolates soy sauces textured soy fibers and tofu The presence of inhibitors of digestive enzymes in soy proteins impairs nutritional quality and possible safety of this important legume Normal processing conditions based on the use of heat do not completely inactivate these inhibitors so that residual amounts of plant protease inhibitors are consumed by animals and man Inhibitors of digestive enzymes are present not only in legumes such as soybeans lima beans and kidney beans but also in nearly all plant foods including cereals and potatoes albeit in much smaller amounts The antinutritional effects of inhibitors of proteolytic enzymes have been widely studied and can be ameliorated by processing and or sulfur amino acid fortification A more urgent concern is reports that rats fed diets containing even low levels of soybean derived inhibitors which are found in foods such as soy based baby formulas may develop over their lifespan pancreatic lesions leading eventually to neoplasia or tumor formation On the other hand recent studies suggest that certain enzyme inhibitors from plant foods may prevent cancer formation in other tissues A key question therefore is whether inhibitors from plant foods constitute a human health hazard *Nutritional and Toxicological Significance of Enzyme Inhibitors in Foods* ,1986-10-31

Nutritional and Toxicological Significance of Enzyme Inhibitors in Foods Mendel Friedman, 1967 Nutritional and Toxicological Consequences of Food Processing Mendel Friedman, 2013-11-21 A variety of processing methods are used to make foods edible to permit storage to alter texture and flavor to sterilize and pasteurize food and to destroy microorganisms and other toxins These methods include baking broiling cooking freezing frying and roasting Many such efforts have both beneficial and harmful effects It is a paradox of nature that the processing of foods can improve nutrition quality safety and taste and yet occasionally lead to the formation of anti nutritional and toxic compounds These multifaceted consequences of food processing arise from molecular interactions among nutrients with each other and with other food ingredients Since beneficial and adverse effects of food processing are of increasing importance to food science nutrition and human health and since many of the compounds formed have been shown to be potent carcinogens and growth inhibitors in animals I organized a symposium broadly concerned with the nutritional and toxicological consequences of food processing The symposium was sponsored by the American Institute of Nutrition AIN Federation of American Societies for Experimental Biology FASEB for its annual meeting in Washington D C April 15 1990 Invited speakers were asked to develop at least one of the following topics 1 Nutrient nonnutrient interactions between amino acids proteins carbohydrates lipids minerals vitamins tannins fiber natural toxicants etc 2 Effects of radiation 3 Thermally induced formation of dietary mutagens antimutagens carcinogens anticarcinogens antioxidants and growth inhibitors 4 Effects of pH on nutritional value and safety

Recent Advances of Research in Antinutritional Factors in Legume Seeds and Rapeseed A J M Jansman, G D Hill, J

Huisman,A F B Van Der Poel,1998-07 This publication contains the proceedings of the 4th International Workshop on Antinutritional Factors in Legume Seeds and Oilseeds held in Toledo Spain on 8 10 March 2004 This series of meetings bring together experts working in this field of Science from throughout the world A major feature of each conference session is an invited review which outlines the advances that have been made in a particular area since the last meeting A major factor that was considered at this meeting was the likely impact of plant genetic modification on the nutritional quality of their seeds for human and animal feeding As an example already a number of legume species and rapeseed have been modified to improve the sulphur amino acid content of their seed and thus their protein quality Besides the major grain legume species and rapeseed that had been discussed at previous meetings in this series number of crop products as potential protein sources for animal feeding were considered for the first time These included cottonseed meal linseed meal and sunflower seed meal The potential of some new exotic crops from Mexico was also covered including Mexican species of the genus *Lupinus* and a Mexican plant from the same family as castor bean which has a very high oil content but is usually toxic Work from Cuba compared the nutritional characteristics of soybean with a range of tropical grain legume species which have received little previous attention A major change at this meeting was the greater consideration of the effects both positive and negative of the consumption of these seeds for human nutrition A major review on the development of allergenicity to legume seed in humans is included There was also consideration of the potential role of antinutritional factors in reducing the growth of various types of tumour cells The presented papers also suggest that the consumption of legume seed in the diet can potentially reduce serum cholesterol levels Overall from the 5 conference sessions there are 52 papers Of these 7 are major invited reviews on the current state of research in this important area for human and animal feeding **Recent**

Crop Plants J. P. Felix D'Mello,C. M. Duffus,John H. Duffus,1991 This volume reviews current knowledge of toxic substances in crop plants with particular reference to their anti nutritional effects in animals and man and the potential for detoxification The distribution and ecological significance of these compounds is also addressed Continuing disquiet over the use of animal by products in livestock nutrition has provided renewed impetus for the greater exploitation of conventional and novel crop plants both as food and as industrial raw materials However a major factor restricting the utilisation of such crops in animal nutrition is the presence of a diverse array of toxic substances capable of inducing effects ranging from loss of hair and wool to severe neurological disorders and even death Significant advances have been made to establish the nature of these compounds and to assess their effects in animals and man As in other branches of biomedical research these developments

have been achieved through the multidisciplinary efforts of chemists biochemists toxicologists nutritionists and molecular geneticists This volume reviews current knowledge of toxic substances in crop plants with particular reference to their anti nutritional effects in animals and man and the potential for detoxification The distribution and ecological significance of these compounds is also addressed Absorption and Utilization of Amino Acids Mendel Friedman, 2018-04-19 Containing 45 papers written by outstanding international authors from 14 countries this three volume compendium brings together the elements needed to understand the factors which influence the utilization of amino acids The wide ranging topics include descriptions of metabolic pathways and mechanisms of the biological utilization of amino acids as well as factors that influence amino acid bioavailability in enteral and parenteral nutrition The use of amino acids to improve the quality and safety of the diet is presented Also discussed are amino acid precursors of biogenic amines and the role of amino acids in atherosclerosis cancer and immunity Scientists from many disciplines will benefit from this broad overview **Food**
