

PREPARING INSTRUCTIONAL OBJECTIVES

Mager, R. F. (1997). *Preparing Instructional Objectives: A Critical Tool in the Development of Effective Instruction* (3rd ed.). Atlanta, GA: The Center for Effective Performance.

- An objective is a collection of words, symbols, and/or pictures describing one of your important intents.
- An objective will communicate your intent to the degree you describe what the learner will be *DOING* when demonstrating achievement of the objective, the important conditions of the doing, and the criterion by which achievement will be judged.
- To prepare a useful objective, continue to modify a draft until these questions are answered:
 - *What do I want the learners/students to be able to do?*
 - *What are the important conditions or constraints under which I want them to perform?*
 - *How well must students perform for me to be satisfied?*
- When the main intent of an objective is covert, an indicator behavior through which the main intent can be detected is added.
- Indicator behaviors are always the simplest, most direct behaviors possible, and they are always something that every trainee already knows how to do well.
- To prepare an objective:
 - Write a statement that describes the main intent or performance expected of the student.
 - If the performance happens to be covert, add an indicator behavior through which the main intent can be detected.
 - Describe relevant or important conditions under which the performance is expected to occur. Add as much description as is needed to communicate the intent to others.

Mager, 1962 **Teacher Education** Gloria G. Salandanan, 2009 *Preparing Instructional Objectives* Robert Frank Mager, 1975 **Designing Instructional Systems** A. J. Romiszowski, 2016-01-08 This book deals with large scale or macro level instructional design which is referred to by other authors variously as curriculum development course design training system design or instructional systems design The emphasis throughout the book is on the application of a systems approach which implies both a way of thinking about the problem and a methodology for seeking and developing solutions Thus the approach of the book is problem oriented The successful problem solver requires more than a technique or procedure He requires experience of similar problems some general principles that he can apply to the class of problems and a great deal of creativity to develop an optimal method of solving each problem This book brings together the theories and practical experience that have been built up by instructional technologists over the last two decades the techniques that are currently most used for the analysis of problems in education and for their solution and a range of new ideas specially developed by the author to encourage the creative element so often missing from educational materials This book is intended for anyone involved in instructional design It is designed on a grid structure to facilitate the reader s choice of chapters Those who wish to gain a general overview may concentrate on the chapters at the theory base and analysis levels Those more practically concerned with course design will find much of use in the synthesis and evaluation levels Those who wish simply to discover what s new in this book and its treatment of instructional design will find what they are seeking principally in the analysis and evaluation levels **Too Simple to Fail** R.
