The Present State of Leptospirosis Diagnosis and Control W.A. Ellis,T.W.A. Little,1986-01-31 A Seminar in the CEC Programme of Coordination of Research on Animal Pathology held at the Veterinary Research Laboratories Belfast Northern Ireland Oct 10 11 1984 Sponsored by the CEC Directorate General for Agriculture Coordination of Agricultural Research

Diseases of Swine Jeffrey J. Zimmerman,Locke A. Karriker,Alejandro Ramirez,Kent J. Schwartz,Gregory W. Stevenson,Jianqiang Zhang,2019-06-18 Provides a fully revised Eleventh Edition of the definitive reference to swine health and disease Diseases of Swine has been the definitive reference on swine health and disease for over 60 years This new edition has been completely revised to include the latest information developments and research in the field Now with full color images throughout this comprehensive and authoritative resource has been redesigned for improved consistency and readability with a reorganized format for more intuitive access to information Diseases of Swine covers a wide range of essential topics on swine production health and management with contributions from more than 100 of the foremost international experts in the field This revised edition makes the information easy to find and includes expanded information on welfare and behavior A key reference for anyone involved in the swine industry Diseases of Swine Eleventh Edition Presents a thorough revision to the gold standard reference on pig health and disease Features full color images throughout the book Includes information on the most current advances in the field Provides comprehensive information on swine welfare and behavior Offers a reorganized format to make the information more accessible Written for veterinarians academicians students and individuals and agencies responsible for swine health and public health Diseases of Swine Eleventh Edition is an essential guide to swine health The 11th edition of Diseases of Swine continues to serve as the gold standard resource for anything and everything related to swine herd health this edition does an outstanding job of keeping up with the advanced diagnostic technologies and the latest research on new or emerging diseases and syndromes there is no other informational resource that comes close to providing the depth or quality of information on the topic of swine diseases as does this book *Current Catalog* National Library of Medicine (U.S.),1979 First multi year cumulation covers six years 1965 70 National Library of Medicine Current Catalog National Library of Medicine (U.S.),1989 , **Cattle Housing Systems, Lameness and Behaviour** H.K. Wierenga,D.J. Peterse,1987-03-31 Proceedings of a Seminar held in Brussels on June 3 4 1986 at the Commission of the European Communities *Helminth Zoonoses* Stanny Geerts,V. Kumar,J. Brandt,1987-06-30 In spite of the availability of modern broad spectrum anthelmintic drugs the prevention and control of helminth zoonoses remain a challenge to human and veterinary parasitologists and to physicians and veterinarians working on the field Although the life cycles of most helminths of zoonotic importance are well known there are still major gaps in our knowledge especially in the fields of epidemiology diagnosis and treatment The International Colloquium on Helminth Zoonoses held at the Institute of Tropical Medicine Antwerp 11 12 December 1986 laid emphasis on more recent

advances made in the control and epidemiology of these zoonotic diseases The disease complexes echinococcosis hydatidosis taeniasis cysticercosis and the larva migrans syndrome were dealt with in considerable detail In the first chapter the phenomenon of strain variation in *Echinococcus* spp is examined in the light of newer findings The progress made in recent years towards a more specific diagnosis and drug targeting in hydatidosis is reported In the second chapter recent advances in immunisation and treatment of cysticercosis are dealt with The possibility of the existence of strain differences in *Taenia saginata* is also discussed The third chapter is devoted to trematode zoonoses with particular reference to the situation in South east Asia Senegal schistosomiasis and Liberia paragonimiasis In the last chapter the larva migrans syndrome is treated in detail with special attention to its etiology and diagnosis Reports on lesser known nematode zoonoses like mammomonosomiasis and oesophagostomiasis are included

Physiological and Pharmacological Aspects of the Reticulo-Rumen L.A.A. Ooms,A.D. Degryse,A.S.J.P.A.M. van Miert,2012-12-06 The success of a scientific workshop depends on a delicate blend of many types of ingredients Most important is to select a provocative topic which is at the forefront of a current investigative study Coupled together with a relatively small but distinguished group of active research scientists known for their continued record of contributing significant findings one has the firm foundation for an exciting and rewarding investment of time and effort This was the setting for the first workshop organized by the European Association for Veterinary Pharmacology and Toxicology Ruminants have been domesticated for many centuries and have served mankind as a source of dairy products meat wool and power The ruminant stomach has long been and still is a major concern for physiologists pathologists clinicians and pharmacologists This workshop was organized and convened in an attempt to strengthen the basic science of the ruminant stomach as it applies to an economically important group of mammals To achieve this various topics were covered by specialists which ensured presentation of new data followed by discussions In this book reviews are presented on the different topics motility control and regulation neurotransmitters and endogenous substances involved flow of digesta comparative aspects role of content and metabolites food intake rumen metabolism chemical manipulation metabolism of xenobiotics and drugs pharmacology of forestomach motility and the reticulo rumen as a pharmacokinetic compartment

Energy Metabolism in Farm Animals M.W. Verstegen,A.M. Henken,2012-12-06 Animal production systems have changed dramatically over the last two decades Knowledge of energy metabolism and environmental physiology has increased as appears from many textbooks on these disciplines The contents of the symposia on energy metabolism of farm animals show this and they have initially focussed on feed evaluation and later on comparative aspects of energy metabolism They show part of the progress being made Application of knowledge of energy metabolism for animals has a long history since Lavoisier In addition to this studies about the environmental requirements of animals have shown that we are still far from accurate assessment of these requirements in terms of nutrients and energy In model studies on energy metabolism researchers have recognized the interaction between the environment and the energy

requirements of animals Estimation of energy requirements has been done in physiological physical and behavioural studies The impact of conditions as encountered by animals in various production systems has been approached from different viewpoints related to these different disciplines In addition various kinds of infections bacterial parasitic subclinical clinical have been evaluated only recently with regard to their effect on protein and/or energy metabolism and thus on production People working in the field of feed evaluation have defined how chemical and physical properties of nutrition influence energy to be derived for maintenance and production *Modelling of Livestock Production Systems* S. Korver, J.A.M. van Arendonk, 1988-03-31 A seminar in the Community Programme for the Coordination of Agricultural Research held in Brussels Belgium April 7-9 1987 Improving Genetic Disease Resistance in Farm Animals Akke Jitske Akkermans, W. Sybesma, 2012-12-06 This publication contains the proceedings of a seminar held in Brussels on November 8-9 1988 The title of the seminar was Reducing the costs of disease by improving resistance through genetics The seminar was held as an activity of the Community Programme for the Coordination of Agricultural Research 1984-1988 Costs of disease depend on losses caused by morbidity mortality and production decreases and on the costs of preventive measures including vaccination and medication Production losses often contribute a major portion to the total costs To reduce costs of disease preventive measures like vaccination preventive medication and hygienic procedures are applied Genetic resistance is an attractive preventive measure because of its consistent nature in the next generations because it precludes veterinary services and because there are no side effects Constraints are the long term investment relatively slow progress per generation in combination with production traits and the considerable lack of knowledge about inheritance of resistance mechanisms in farm animals *Acute Virus Infections of Poultry* J.B. McFerran, M.S. McNulty, 2012-12-06 This book is based on the proceedings of a seminar on acute viral infections of poultry which was held in Brussels on 13-14 June 1985 The aim of the seminar which was sponsored by the CEC was to gather information on those infections of immediate or increasing importance It is hoped that dissemination of this information will make it easier to harmonize diagnostic and control measures throughout the member states of the EEC Several points emerge from recent outbreaks of highly pathogenic avian influenza In view of the apparent change in pathogenicity of the virus involved in the outbreak in the USA infections of domestic poultry particularly with H5 and H7 subtypes should be regarded as a potential threat even if the viruses involved are of low pathogenicity The reasons for the amount of lateral spread which occurred in the USA outbreak are still not clear and it can not be assumed that future outbreaks of highly pathogenic avian influenza will tend to be self-limiting as in the past The importance of denying access of wild birds particularly water fowl to domestic poultry needs to be re-emphasised Lastly there appears to be increasing support for a combination of slaughter and ring vaccination to control future outbreaks of spreading avian influenza **The Present State of Leptospirosis Diagnosis and Control** W. A. Ellis, T. W. A. Little, 1986 **Diagnostic Ultrasound and Animal Reproduction** M.A.M. Taverne, A.H. Willemse, 2013-06-29 The use of

ultrasonic imaging techniques for diagnostic purposes in veterinary medicine and animal science has lagged far behind their use in human medicine In the area of domestic animal reproduction diagnostic ultrasonography has a relatively short history Reports on B mode scanning first appeared as late as 1969 when Stouffer and co workers used it for counting foetal numbers in late gestation sheep After Lindahl had re evaluated the potential of two dimensional ultrasonography for pregnancy diagnosis in sheep in 1976 results of the first large scale field trials by Fowler and Wilkins on predicting foetal numbers during the first half of gestation in sheep were published as recently as 1980 In this year also the first paper by Palmer and co workers on ultrasonic scanning of the uterus and ovaries in the mare appeared The improvement of diagnostics which was achieved by the application of this technique is illustrated by its present routine use in clinical equine practice and sheep breeding Besides offering an accurate early pregnancy diagnosis in species such as the horse cow sheep goat pig and dog ultrasonography enables the visualization of ovarian and uterine structures for the identification of both physiological and pathological conditions In this way it replaces or supplements the more common diagnostic techniques used by the general practitioner so far Ultrasonography has also opened several new lines of research for clinicians and research workers

Animal Disease Occurrence, 1986 **Molecular Biology of Spirochetes** Felipe C. Cabello, Dagmar Hulska, Henry P. Godfrey, 2006 Diseases produced by spirochetes including Lyme borreliosis syphilis and leptospirosis are on the rise worldwide This volume focuses on a series of state of the art presentations of the research taking place in the laboratories of the contributors and serves as an introduction to those individuals entering in the field of spirochete research Summer Mastitis G. Thomas, H.J. Over, U. Vecht, P. Nansen, 2012-12-06 This Community meeting has been organised since over the past 15 years in different countries of Western Europe including Scandinavia a lot of research has been directed to the summer mastitis problem Summer mastitis in cattle is a well known disease which because of its abruptness and the difficulties concerned in defining the predisposing factors and the pathogens involved is hard to control Moreover as it is anticipated that in the transmission of the bacteria one or more dipterans are involved the complexity in defining the disease and hence coordinating our scientific knowledge in relation to practical control was stimulus enough for this workshop to be organised Our aims can be summarised in the following goals 1 Exchange of information in the practical technical and scientific field in order to stimulate a coordinated research approach at a time in which the cattle husbandry sector is under great economical stress 2 Inform research workers from countries where the disease is or seems to be not endemic on aspects that might be of interest for them in the approach of comparable problems 3 To draw up conclusions and recommendations with regard to future research activities in order to avoid needless duplication of effort **Follicular Growth and Ovulation Rate in Farm Animals** J.F. Roche, D. O'Callaghan, 1987-02-28 Hypotheses regarding development of dominant follicles during a bovine estrous cycle Inhibin and ovarian function Development of preovulatory follicles in the cow from luteolysis until ovulation Follicular development in heifers chronically treated with bromocryptine Pathology of

Domestic Animals ,2012-12-02 The all new Fourth Edition of Pathology of Domestic Animals comprehensively covers the biology and pathology of diseases of domestic animals on a systemic basis Updated and expanded to reflect the current knowledge of the study of domestic animal diseases this three volume set appeals to veterinarians veterinary students trainee veterinary pathologists learning the scope of their field and practicing pathologists confronted with diagnostic problems Improvements over the Third Edition All material completely updated and expanded to reflect the current knowledge of the study of diseases of domestic animals Covers the biology and pathology of diseases of domestic animals on a global basis Emphasizes the pattern of disease and the defense mechanisms of each organ system Several new illustrations
