

The book cover features a photograph of a falcon in mid-air, its wings spread wide, attacking a rabbit. The falcon is positioned on the left side of the cover, with its head and talons reaching towards the rabbit. The rabbit is on the right side, appearing to be falling or being caught. The background is a clear, light blue sky. The title 'PYRAMIDS OF LIFE' is printed in large, white, sans-serif capital letters in the upper right quadrant. Below the title is the subtitle 'PATTERNS OF LIFE AND DEATH IN THE ECOSYSTEM' in smaller, white, sans-serif capital letters. The authors' names, 'HARVEY CROZE' and 'JOHN READER', are listed below the subtitle. At the bottom right, it says 'FOREWORD BY RICHARD DAWKINS'.

Pyramids Of Life Patterns Of Life And Death In The Ecosystem:

The Natural Law of Cycles James H. Bunn, 2017-07-28 The Natural Law of Cycles assembles scientific work from different disciplines to show how research on angular momentum and rotational symmetry can be used to develop a law of energy cycles as a local and global influence Angular momentum regulates small scale rotational cycles such as the swimming of fish in water the running of animals on land and the flight of birds in air Also it regulates large scale rotation cycles such as global currents of wind and water James H Bunn introduces concepts of symmetry balance and angular momentum showing how together they shape the mobile symmetries of animals Chapter 1 studies the configurations of animals as they move in a head first direction Chapter 2 shows how sea animals follow currents and tides generated by the rotational cycles of the earth In chapter 3 Bunn explores the biomechanical pace of walking as a partial cycle of rotating limbs On a large scale angular momentum governs balanced shifts in plate tectonics Chapter 4 begins with an examination of rotational wind patterns in terms of the counter balancing forces of angular momentum The author shows how these winds augment the flights of birds during migrations A final chapter centres on the conservation of energy as the most basic principle of science Bunn argues that in the nineteenth century the unity of nature was seen in the emergent concept of energy not matter as the source of power including the movements of animals and machines In each chapter Bunn features environmental writers who celebrate mobile symmetries This book will interest students naturalists and advocates of the environmental movement *The Tablet*, 2002 The international Catholic weekly Textbook of Environment and Ecology Vir Singh, 2024-03-22 This textbook is focused on fundamentals of environment and ecology for undergraduate and graduate students This is first of its kind book dealing with physical environment ecosystems biological diversity environmental pollution and environment influenced natural resource ecology and management This will cater to the needs of the students examinees trainees and teachers It consists of 23 chapters spread over 5 sections i e ecosystem analysis natural resources biodiversity environmental disruptions and environmental management The textbook is well aligned with the syllabus of all central and state universities and offers the latest insights as well to the students of undergraduate and postgraduate courses of ecology and environmental sciences Every chapter provides summary points to remember and exercises Each exercise includes 20 multiple choice questions 10 short answer questions and 5 long answer questions The textbook is a comprehensive coverage for basic and advanced courses in ecology and environmental sciences Each topic is supported by illustrations tables and information boxes etc **The Loom of Life** Menno Schilthuizen, 2008-08-15 In an age of increasing environmental problems ecology has had to grow up fast from a discipline dealing with relatively simple interactions between species to one that tries to explain changes in global patterns of diversity and richness The issues are complex Every species may seem to have its own unique role but if that is true then why are there hundreds of species of plankton in an ecosystem with only a handful of niches The tropics have a high biodiversity but does anybody know why And how can a single

introduced tree species wreak havoc in Hawaii's rainforests when it is one of thousands of quietly coexisting tree species in its native continent South America The strength of this book is that it will help digest some of these more complex issues in the ecology of biodiversity It will do this by zooming out from the local scale to the global scale in a number of steps marrying community ecology with macroecology and introducing unexpected nuggets of natural history along the way The reader will notice that the larger the scale the more the familiar niche concept appears to be overshadowed by exotic fields from fractal and complexity theory However scientists differ in opinion on the scale at which niches become irrelevant These differences of opinion but also the search for unified ecological theories will form another force by which the story will be carried along to its conclusion A conclusion which surprisingly seeks to find a glimpse of the globe's future in the traces from its past
