## Quality In Science:

*Quality in Science* Marcel Chotkowski LaFollette, 1982 The essays in this volume offer a wide variety of fresh perspectives on the assessment of quality in science and technology They proceed from the premise that while quantitative measures may be useful for gross assessments a rounded picture of scientific activity requires qualitative measures that are sensitive to the ethical conceptual social and historical contexts of science Among the questions they explore are How do we develop such qualitative measures Are different measures needed for different groups involved in and affected by scientific work What are the constraints on quality Overall the book provides a solid base on which the debate over public assessments of science and the development of indicators of quality may proceed Contributors include Sissela Bok Lewis Branscomb Harvey Brooks George E Brown Jr Don Fuqua Orrin G Hatch Donald Hornig Roy MacLeod Bruce Mazlish Robert S Morison Kenneth Prewitt Doug Walgren Peter Weingart and Daniel Yankelovich Marcel Chotkowski La Follette is editor of the journal *Science Technology Human Values* in which most of these essays first appeared

Committee on Appropriations,1956 *Practical experiments in school science lessons and science field trips* Great Britain: Parliament: House of Commons: Science and Technology Committee,2011-09-14 This Science and Technology Committee report on practical experiments in school science lessons and science field trips concludes that many students are receiving poor practical science experiences during their secondary school education There was no credible evidence to support the frequently cited explanation of health and safety concerns for a decline in practicals and trips Instead more focus is needed on what happens after teachers have been recruited to the profession knowledge and practical skills must be maintained and developed in order for high quality science education to be delivered High quality science facilities and qualified and experienced technical support are vital A career structure for technical staff should be provided and the government should ensure schools provide science facilities to match its aspirations for science education Practical science is relatively expensive and carries little cachet for parents comparing schools The inspection regime and the requirements set for exam boards should therefore drive higher quality with more and better practical science lessons The Committee also found a lack of coherence in the provision of science educational materials It urges the science community to utilise the
