Quantum Groups and Their Primitive Ideals Anthony Joseph, 2012-12-06 by a more general quadratic algebra possibly obtained by deformation and then to derive $R_q G$ by requiring it to possess the latter as a comodule A third principle is to focus attention on the tensor structure of the category of modules This means of course just defining an algebra structure on $R_q G$ but this is to be done in a very specific manner Concretely the category is required to be braided and this forces the existence of an R matrix satisfying in particular the quantum Yang Baxter equation and from which the algebra structure of $R_q G$ can be written down Finally there was a search for a perfectly self dual model for $R_q G$ which would then be isomorphic to $U_q g$ Apparently this failed but V G Drinfeld found that it could be essentially made to work for the Borel part of $U_q g$ denoted U_b and further found a general construction the Drinfeld double q mirroring a Lie bialgebra This gives $U_q g$ up to passage to a quotient One of the most remarkable aspects of the above superficially different approaches is their extraordinary intercoherence In particular they essentially all lead for G semisimple to the same and hence canonical objects $R_q G$ and $U_q g$ though this epithet may as yet be premature **International mathematical news**, 1998
