

## Chapter 1

# Radiation Exchange Between Surfaces

### 1.1 Motivation and Objectives

Thermal radiation, as you know, constitutes one of the three basic modes (or mechanisms) of heat transfer, i.e., conduction, convection, and radiation. Actually, on a physical basis, there are only two mechanisms of heat transfer: diffusion (the transfer of heat via molecular interactions) and radiation (the transfer of heat via photons/electromagnetic waves). Convection, being the bulk transport of a fluid, is not precisely a *heat transfer mechanism*.

The physics of radiation transport are distinctly different than diffusion transport. The latter is a *local* phenomena, meaning that the rate of diffusion heat transfer, at a point in space, precisely depends only on the local nature about the point, i.e., the temperature gradient and thermal conductivity at the point. Of course, the temperature field will depend on the boundary and initial conditions imposed on the system. However, the diffusion heat flux at, say, one point in the system does not *directly* effect the diffusion flux at some distant point. Radiation, on the other hand, is not local; the flux of radiation at a point will, in general, be directly and instantaneously dependent on the radiation flux at all points in a system. Unlike diffusion, radiation can act over a distance. Accordingly, the mathematical description of radiation transport will employ an *integral* equation for the radiation field, as opposed to the *differential* equation for heat diffusion.

Our objectives in studying radiation in the short amount of time left in the course will be to

1. Develop a basic physical understanding of electromagnetic radiation, with emphasis on the properties of radiation that are relevant to heat transfer.
2. Describe radiation exchange among surfaces, in which the surfaces can be perfect absorbers of radiation (black) or diffusely absorbing (gray).
3. Introduce the topic of radiation transfer in a participating medium that absorbs, emits, and scatters radiation, and describe the formulation and application of the radiative transport equation.

## **Radiation Exchange An Introduction:**

**Radiation Exchange** Jack H. Taylor, 2012-12-02 Here is an introductory examination of electromagnetic radiation This book deals with the radiation laws the phenomenon of radiation exchange the quantification of radiation and the mechanisms whereby radiation is attenuated in passing through the Earth's atmosphere It can be used as a supplement to an introductory physics or astronomy text and also as a guide for members of the infrared community who would like additional insight into the area of radiation exchange The concepts discussed here are well within the grasp of undergraduate students After studying this book the reader will have developed a clear understanding of the phenomenon of radiation exchange and will appreciate more thoroughly its importance in nature and its numerous applications

**A Textbook of Heat and Mass Transfer, 7e** Rajput R.K., 2019 Heat and Mass Transfer is a comprehensive textbook for the students of Mechanical Engineering and a must buy for the aspirants of different entrance examinations including GATE and UPSC Divided into 5 parts the book delves into the subject beginning from Basic Concepts and goes on to discuss Heat Transfer by Convection and Radiation and Mass Transfer The book also becomes useful as a question bank for students as it offers university as well as entrance exam questions with solutions

**Heat Transfer** Gregory Nellis, Sanford A. Klein, 2009 This book provides engineers with the tools to solve real world heat transfer problems It includes advanced topics not covered in other books on the subject The examples are complex and timely problems that are inherently interesting It integrates Maple MATLAB FEHT and Engineering Equation Solver EES directly with the heat transfer material

*Introduction to Thermal Systems Engineering* Michael J. Moran, Howard N. Shapiro, Bruce R. Munson, David P. DeWitt, 2002-09-17 Ein Überblick über technische Aspekte thermischer Systeme In einem Band besprochen werden Thermodynamik Strömungslehre und Wärmetransport ein Standardwerk auf diesem Gebiet stützt sich auf die bewährtesten Lehrbücher der einzelnen Teilgebiete Moran Munson Incopera führt strukturierte Ansätze zur Problemlösung ein diskutiert Anwendungen die für Ingenieure verschiedenster Fachrichtungen von Interesse sind

**Heat and Mass Transfer** Rajendra Karwa, 2016-09-23 This textbook presents the classical treatment of the problems of heat transfer in an exhaustive manner with due emphasis on understanding of the physics of the problems This emphasis is especially visible in the chapters on convective heat transfer Emphasis is laid on the solution of steady and unsteady two dimensional heat conduction problems Another special feature of the book is a chapter on introduction to design of heat exchangers and their illustrative design problems A simple and understandable treatment of gaseous radiation has been presented A special chapter on flat plate solar air heater has been incorporated that covers thermo hydraulic modeling and simulation The chapter on mass transfer has been written looking specifically at the needs of the students of mechanical engineering The book includes a large number and variety of solved problems with supporting line diagrams The author has avoided duplicating similar problems while incorporating more application based examples All the end of chapter exercise problems are supplemented with stepwise answers Primarily designed to serve as a complete

textbook for undergraduate and graduate students of mechanical engineering the book will also be useful for students of chemical automobile production and industrial engineering streams The book fully covers the topics of heat transfer coursework and can also be used as reference for students preparing for competitive graduate examinations **Satellite**

**Thermal Control for Systems Engineers** Robert D. Karam,1998 **Terrestrial Hydrometeorology** W. James Shuttleworth,2012-01-30 Both hydrologists and meteorologists need to speak a common scientific language and this has given rise to the new scientific discipline of hydrometeorology which deals with the transfer of water and energy across the land atmosphere interface Terrestrial Hydrometeorology is the first graduate level text with sufficient breadth and depth to be used in hydrology departments to teach relevant aspects of meteorology and in meteorological departments to teach relevant aspects of hydrology and to serve as an introductory text to teach the emerging discipline of hydrometeorology The book will be essential reading for graduate students studying surface water hydrology meteorology and hydrometeorology It can also be used in advanced undergraduate courses and will be welcomed by academic and professional hydrologists and meteorologists worldwide Additional resources for this book can be found at <http://www.wiley.com/go/shuttleworth>

**hydrometeorology** **An Introduction to Transport Phenomena in Materials Engineering** David R. Gaskell,1992 This introduction to transport phenomena in materials engineering balances an explanation of the fundamentals governing fluid flow and the transport of heat and mass with their common applications to specific systems in materials engineering It introduces the influences of properties and geometry on fluid flow using familiar fluids such as air and water Covers topics such as engineering units and pressure in static fluids momentum transport and laminar flow of Newtonian fluids equations of continuity and conservation of momentum and fluid flow past submerged objects turbulent flow mechanical energy balance and its application to fluid flow transport of heat by conduction transport of heat by convection transient heat flow heat transport by thermal radiation mass transport in the solid state by diffusion mass transport in fluids Includes extensive appendices *Introductory Ecology* Peter Cotgreave,Irwin Forseth,2009-04-01 In this age of increasing human domination of the Earth s biological and physical resources a basic understanding of ecology is more important than ever Students need a textbook that introduces them to the basic principles of ecological science one that is relevant to today s world and one that does not overwhelm them with detail and jargon Peter Cotgreave and Irwin Forseth have designed this book to meet the needs of these students by providing a basic synthesis of how individual organisms interact with their physical environment and with each other to generate the complex ecosystems we see around us The unifying theme of the book is biodiversity its patterns causes and the growing worldwide threats to it Basic ecological principles are illustrated using clearly described examples from the current ecological literature This approach makes the book valuable to all students studying ecology Examples have been chosen carefully to represent as wide a range of ecosystems terrestrial and aquatic northern and southern hemisphere and life forms animal plant and microbe as possible Particular attention is paid to consequences of

global change on organisms populations ecological communities and ecosystems The end result is a text that presents a readable and persuasive picture of how the Earth's natural systems function and how that functioning may change over the coming century Features include strong coverage of applied and evolutionary ecology applications of ecology to the real world a question orientated approach the only comprehensive treatment of ecology written for the introductory student an emphasis on definitions of key words and phrases an integration of experimental observational and theoretical material examples drawn from all over the world and a wide variety of organisms a logical structure building from the response of individual organisms to physical factors through population growth and population interactions to community structure and ecosystem function suggested further reading lists for each chapter boxes to explain key concepts in more depth dedicated textsite featuring additional information and teaching aids [www.blackwellpublishing.com/cotgreave](http://www.blackwellpublishing.com/cotgreave) Peter Cotgreave is an animal ecologist who has worked for the University of Oxford and the Zoological Society of London His research interests centre on abundance and rarity within animal communities Irwin Forseth is a plant physiological ecologist who has taught introductory ecology and plant ecology at the University of Maryland since 1982 His research focuses on plant responses to the environment The authors have studied organisms as diverse as green plants insects and mammals in habitats from deserts to tropical rainforests They have worked in ecological research and education in Africa Asia North and South America Europe and the Caribbean

*Introduction to Catalytic Combustion* R.E. Hayes, 2021-10-24 In a clear and concise manner this book explains how to apply concepts in chemical reaction engineering and transport phenomena to the design of catalytic combustion systems Although there are many textbooks on the subject of chemical reaction engineering catalytic combustion is mentioned either only briefly or not at all The authors have chosen three examples where catalytic combustion is utilized as a primary combustion process and natural gas is used as a fuel stationary gas turbines process fluid heaters and radiant heaters these cover much of the area where research is currently most active In each of these there are clear environmental benefits to be gained illustrating catalytic combustion as a cleaner primary combustion process The dominant heat transfer processes in each of the applications are different as are the support systems flow geometrics and operating conditions
