Subcommittee on Health and the Environment, 1979 **Effect of Radiation on Human Health: Health effects of ionizing radiation** United States. Congress. House. Committee on Interstate and Foreign Commerce. Subcommittee on Health and the Environment, 1979 **Environmental Monitoring Technologies for Improving Global Human Health** Pasko, Olga Anatolievna, Lebedeva, Nadezhda Anatolievna, 2025-04-22

Effective environmental monitoring is essential for assessing ecological health and responding to emerging threats posed by human activity and climate change. As new anthropogenic factors continue to impact ecosystems, traditional monitoring methods must evolve to provide accurate real-time data for decision making. Advancements in monitoring technologies enable targeted interventions that consider regional characteristics, natural complexities, and varying levels of human impact. By developing an innovative monitoring system, society can enhance environmental safety, mitigate degradation, and implement sustainable practices that protect ecosystems for future generations. This approach ensures a proactive data-driven response to environmental challenges, fostering long-term ecological balance and resilience.

Environmental Monitoring Technologies for Improving Global Human Health summarizes, systematizes, and evaluates monitoring technologies to improve the environmental situation and ensure environmental safety. It considers regional characteristics, specifics of natural complexes, level of anthropogenic load, and more. Covering topics such as biomaterials, radioactive elements, and satellite data, this book is an excellent resource for nature conservationists, environmentalists, manufacturing specialists, scientists, professionals, researchers, scholars, academicians, and more.

Climate Change and Human Health Anthony J. McMichael, 2003.
