Golden,Richard Wakeford,2024-11-25 This book presents original research findings of The Million Person Study of Low Dose Radiation Health Effects MPS the largest and most comprehensive epidemiologic study of its kind to investigate the health effects of low level chronic radiation exposure on American workers and veterans throughout the 20th century Since the early 1900s epidemiologists have studied the consequences of radiation exposures yet the health effects of low levels received gradually over time remain unresolved This uncertainty comes at a time when the public and workers are experiencing ever increasing levels of radiation exposure from advances in medical radiation imaging techniques e g CT scans frequent flying at high altitudes and environmental and occupational exposures The MPS is providing answers by studying 30 radiation exposed U S populations including workers at nuclear power plants radiologists workers at former Manhattan Project sites nuclear submariners nuclear weapons test participants atomic veterans industrial radiographers and radium dial painters Ongoing for more than 20 years and coordinated by the National Council on Radiation Protection and Measurements Vanderbilt University Medical Center and Memorial Sloan Kettering Cancer Center the MPS is a national effort supported by the Department of Energy National Aeronautics and Space Administration U S Navy Defense Threat Reduction Agency Nuclear Regulatory Commission Centers for Disease Control and Prevention and the Environmental Protection Agency Unparalleled in scope and quality the MPS provides an understanding of low dose health effects that is desperately needed for decision makers and the radiation protection community as society continues to increase the uses of radiation technologies Individual chapters were originally published in the International Journal of Radiation Biology **Radiation Health Risk Sciences** Masahiro Nakashima,Shunichi Yamashita,Yuji

Nagayama,Kunihiro Tsukasaki,Noboru Takamura,2008-12-22 Radiation safety and risk management a critical issue in the nuclear age is an ongoing concern in the field of radiation health risk sciences It is the particular mission and task of the Nagasaki University Global COE program to explore human health risks from radiation on a global scale and to come up with measures for overcoming its negative legacies Ionizing radiation is a well documented human cancer risk factor and long

term health consequences in individuals exposed at a young age to such events as the Hiroshima and Nagasaki atomic bombing are now being followed up. Unique and comprehensive, this book introduces updated radiation health related issues including the proper collection and analysis of biological samples, cancer research, psychological effects, fair disclosure, and the effects of low dose exposure as they apply to future public health policy. Also addressed is the need for emergency radiation medicine in case of accidents.

Radiation and Health Thormod Henriksen, David H. Maillie, 2003-12-16

Radiation and the effects of radioactivity have been known for more than 100 years. International research spanning this period has yielded a great deal of information about radiation and its biological effects, and this activity has resulted in the discovery of many applications in medicine and industry, including cancer therapy, medical diagnostics, and quality control during manufacturing. After Chernobyl, there has been a tendency to regard radiation as harmful even in situations where the doses are equal to or below the natural level. *Radiation and Health* presents a balanced view of the nature of radiation and its existence in the environment, as well as discussing its effects on plants, animals, and humans. It also provides a survey of knowledge to date from the discovery and basic theory of radiation and radioactivity to more recent developments concerned with the nature of radiation and its effect on biological systems. Numerous examples, exercises, and diagrams are included to make this book accessible to non-specialists. *Radiation and Health* provides information about the uses and consequences of ionizing radiation in medicine, research, and industry. It offers a basis for applying some basic calculations and comparing the results, and identifies risk factors to help establish rules and regulations that limit radiation doses both to the individual and to society.

Electromagnetic Fields, Environment and Health Anne Perrin, Martine Souques, 2013-02-11

A good number of misconceptions are currently circulating on the effects of non-ionizing radiations on our health, which can lead to an oversimplification of the issue to potentially dangerous assumptions or to misleading data analysis. Health effects may be exaggerated or, on the contrary, underplayed. The authors of this work, doctors, engineers, and researchers, have endeavored to supply validated and easily understandable scientific information on the electromagnetic fields and their biological and health effects. After a general review of the physics of the waves and a presentation of non-ionizing radiations, the authors review the main emission sources encountered in our daily environment. They summarize simply but as accurately as possible the current knowledge on their biological effects. The safety limits recommended by international organizations are presented for the different frequency ranges. This book is intended for doctors, teachers, scientists, students, policy makers, and anyone else interested in a deeper understanding of the health effects of electromagnetic fields. Intended to serve a broad readership, everyone will approach it according to their respective level of

curiosity and knowledge It is neither an exhaustive inventory of all the studies made to date nor a survey text focusing only on some chosen studies Nor is the objective to present all the sources of non ionizing radiations Interested readers will be given the opportunity to broaden their knowledge also by consulting the selected bibliography presented by the authors at the end of each chapter
