constitutes valid and valuable knowledge how we know and who gets to say The book argues that for OA to deliver its potential it first needs to be associated with epistemic openness a wider and more inclusive understanding of what constitutes valid and valuable knowledge It also needs to be accompanied by participatory openness enabling contributions to knowledge from more diverse communities Interacting with relevant theory and current practice the book discusses the challenges in implementing these different forms of openness the relationships between them and their limits Achieving Global Open Access is essential reading for academics and students engaged in the study of Library and Information Science Open Access and Publishing It will also be valuable and interesting to library and publishing professionals around the world

Alienation and Nature in Environmental Philosophy Simon Hailwood, 2015-08-21 Many environmental scientists scholars and activists characterise our situation as one of alienation from nature but this notion can easily seem meaningless or irrational In this book Simon Hailwood critically analyses the idea of alienation from nature and argues that it can be a useful notion when understood pluralistically He distinguishes different senses of alienation from nature pertaining to different environmental contexts and concerns and draws upon a range of philosophical and environmental ideas and themes including pragmatism eco phenomenology climate change ecological justice Marxism and critical theory His novel perspective shows that different environmental concerns both anthropocentric and nonanthropocentric can dovetail rather than compete with each other and that our alienation from nature need not be something to be regretted or overcome His book will interest a broad readership in environmental philosophy and ethics political philosophy geography and environmental studies
