Pleural Diseases Richard W. Light, 2007. Thoroughly updated for its Fifth Edition, Dr Light's classic text provides a focused single authored perspective on the pathophysiology, clinical manifestations, diagnosis and management of pleural diseases. This edition has three new chapters on physiological effects of a pneumothorax or pleural effusion, animal models in pleural investigation and cytokines and the pleura. Other chapters present significant updates on use of thoracoscopy in diagnosis of pleural effusions and on new diagnostic tests for mesothelioma, parapneumonic effusion and effusions due to congestive heart failure. Also included are discussions of recent advances in the therapy of malignant pleural effusions, mesothelioma and parapneumonic effusions.

Diagnostic Radiology Paediatric Imaging Arun Kumar Gupta, Veena Chowdhury, Niranjana Khandelwal, Ashu Seith Bhalla, 2011-07. Rapid advances are taking place in the field of imaging. This results in the need for re-evaluating and redefining the role of a modality in different clinical scenarios. Coupled to this particularly in paediatric radiology is the need for ensuring patient safety. The industry has made significant attempts to minimize radiation exposures in imaging and this is pre-requisite that cannot be over-emphasized in children. Paediatric radiology is already a well established subspecialty in the West but in the developing world due to the paucity of trained radiologists in proportion to our population every practicing radiologist needs to be aware of the special needs and disease entities in children. The third edition of the book has been designed to include current recommendations, guidelines and existing knowledge on the subject. The content of all chapters has been updated while some have been significantly restructured. New chapters have also been added. It is our earnest hope that our readers will find this text informative and that it will aid in their learning process and daily practice.
